### Warranty/Remedy

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Contact your local sales office for warranty information. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace without charge those items it finds defective. The foregoing is Buyers' sole remedy and is **in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose.** Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for this use.

While we provide application assistance personally, through our literature and the Honeywell web site, it is up to the customer to determine the suitability of the product in the application.

## **Intended use**

The APT4000TC is used for measurement of electrical conductivity and temperature in liquids using electrodeless (toroidal) sensors.

Fields of application are: biotechnology, chemical industry, environment, food processing, water/waste-water treatment.

The sturdy molded enclosure can be fixed into a control panel or mounted on a wall or at a post. The protective hood provides additional protection against direct weather exposure and mechanical damage.

The device provides a second current output for temperature measurement, a PID controller (making use of the relay contacts), and a universal power supply for 24 ... 230 V AC/DC. For CIP applications, you can switch between two parameter sets.

## **Trademarks**

The following names are registered trademarks. For practical reasons they are shown without trademark symbol in this manual.

Sensocheck®

Sensoface®

VariPower®

# Safety information

## Be sure to read and observe the following instructions!

The device has been manufactured using state of the art technology and it complies with applicable safety regulations. When operating the device, certain conditions may nevertheless lead to danger for the operator or damage to the device.

### CAUTION

Commissioning may only be carried out by trained experts. Whenever it is likely that protection has been impaired, the device shall be made inoperative and secured against unintended operation. The protection is likely to be impaired if, for example:

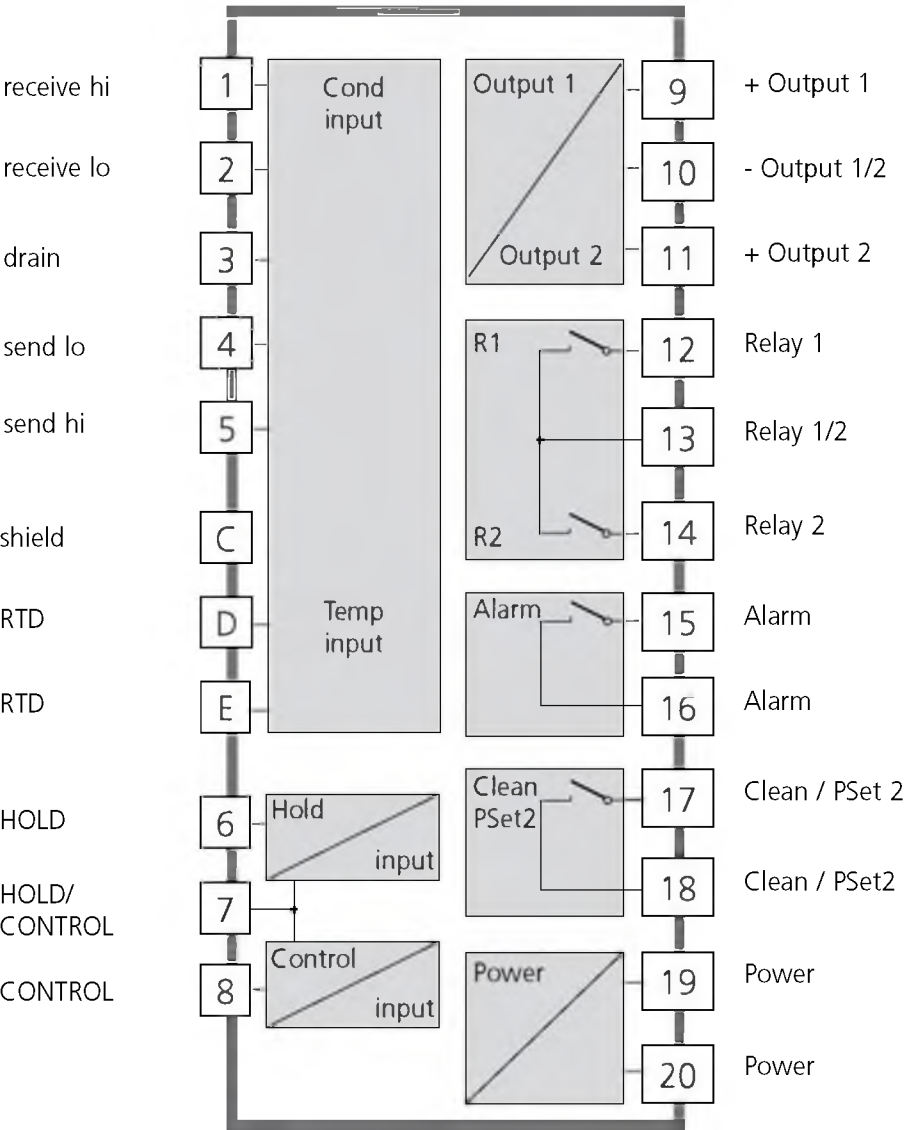

- the device shows visible damage
- the device fails to perform the intended measurements
- after prolonged storage at temperatures above 70 °C
- after severe transport stresses

Before recommissioning the device, a professional routine test in accordance with EN 61010-1 must be performed. This test should be carried out by the manufacturer.

### CAUTION

Before commissioning it must be proved that the device may be connected with other equipment.

Overview of APT4000TC

# Assembly

## Package contents

Check the shipment for transport damage and completeness.  
The package should contain:

- Front unit of APT4000TC
- Rear unit
- Bag containing small parts
- This instruction manual
- Specific test report

# Installation and connection

## Installation instructions

- Installation may only be carried out by trained and qualified personnel in accordance with the instruction manual and as per applicable standards and regulations.
- Be sure to observe the technical specifications and input ratings during installation.
- Be sure not to notch the conductor when stripping the insulation.
- Before connecting the device to the power supply, make sure that its voltage lies within the range 20.5 to 253V AC/DC.
- All parameters must be set by a system administrator prior to commissioning.

The terminals are suitable for single wires and flexible leads up to 2.5 mm<sup>2</sup> (AWG 14).

### CAUTION

Be sure to observe the additionally applicable national safety instructions!

## Terminal assignments

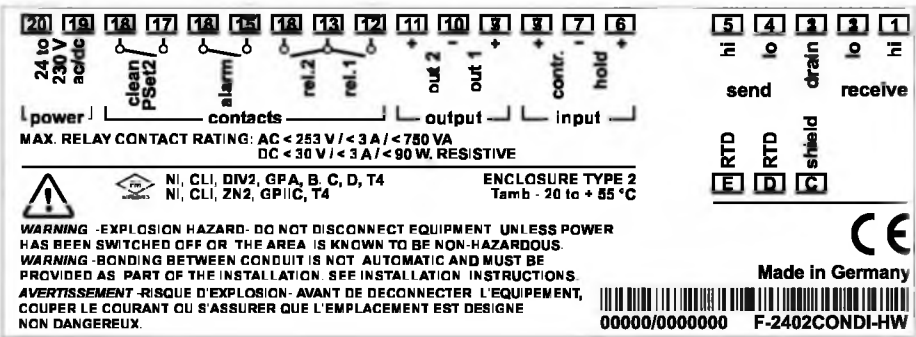

Fig.: APT4000TC terminal assignments

- 1) Terminals for temperature probe and outer shield
- 2) Terminals for toroidal conductivity sensor
- 3) Terminals for power supply

Fig.: Information on installation, rear side of device

## Division 2 wiring

The connections to the analyzer must be installed in accordance with the National Electric Code (ANSI-NFPA 70) Division 2 hazardous (classified) location non-incendive wiring techniques.

## Conductivity measurement with Honeywell 5000TC toroidal conductivity sensor

The Honeywell 5000TC toroidal conductivity sensor is used to measure low to highest conductivity values. It can be used for measurements in safe areas.

### APT4000TC

### Note:

For special mounting conditions of the sensor, the cell factor can vary between 4.0 and 4.5. Therefore, the user should perform a wet calibration of each new sensor to determine the exact cell factor.

### Settings for Honeywell 5000TC toroidal conductivity sensor

	Menu	Setting
Temp probe	CONF 1200	Pt 1000
Cell factor	CAL 1100	4.44

# Operation: Keypad

	Start, end calibration
	Start, end configuration
	Select digit position (selected position flashes)
	Edit digit
	<ul style="list-style-type: none"> <li>• Calibration: Continue in program flow</li> <li>• Configuration: Confirm entries, next configuration step</li> <li>• Measuring mode: Display output current</li> </ul>
 → 	Cal Info: Display of cell factor and zero point
 → 	Error Info: Display of last error message
 + 	Start GainCheck device self-test

## Safety functions

### **Sensocheck, Sensoface sensor monitoring**

Sensocheck continuously monitors the sensor and its wiring. Sensocheck can be switched off (see Configuration of alarm settings).

**Sensoface** provides information on the conductivity sensor condition. The primary coil and its lines are continuously monitored for short circuits, the secondary coil and its lines are checked for open circuits.

The three Sensoface indicators inform of the sensor condition.

### **GainCheck device self-test**

A display test is carried out, the software version is displayed and the memory and measured value transfer are checked.

Start GainCheck device self-test:  + 

### **Automatic device self-test**

The automatic device self-test checks the memory and measured-value transfer. It runs automatically in the background at fixed intervals.

# Safety functions

## Hold mode

Display: 

The Hold mode is a safety state during configuration and calibration. Output current is frozen (Last) or set to a fixed value (Fix). Alarm and limit contacts are disabled.

If the calibration or configuration mode is exited, the device remains in the Hold mode for safety reasons. This prevents undesirable reactions of the connected peripherals due to incorrect configuration or calibration. The measured value and "HOLD" are displayed alternately. The device only returns to measuring mode after **ENTER** is pressed and 20 seconds have passed.

**To activate the Hold mode from outside**

The Hold mode can be activated from outside by sending a signal to the Hold input (e.g. from the process control system).

Hold active	Hold inactive
10 ... 30 V AC/DC	0 ... 2 V AC/DC

# Configuration

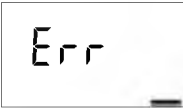

In the Configuration mode you set the device parameters. The device can store two different parameter sets and switch between them. Sensor data and "Clean/Pset2" output are edited in parameter set 1 only. They are valid for both parameter sets.

Configuring		Press <b>CONF</b> .
-------------	---	---------------------

<b>Parameter set 1:</b>		Enter mode code "1200": <b>Edit parameter set 1</b> with <b>▶</b> and <b>▲</b> , confirm/proceed with <b>ENTER</b> .
-------------------------	---	---

<b>Parameter set 2:</b> "88" appears in the display.		Enter mode code "1288": <b>Edit parameter set 2</b> with <b>▶</b> and <b>▲</b> , confirm/proceed with <b>ENTER</b> .
---	---	---

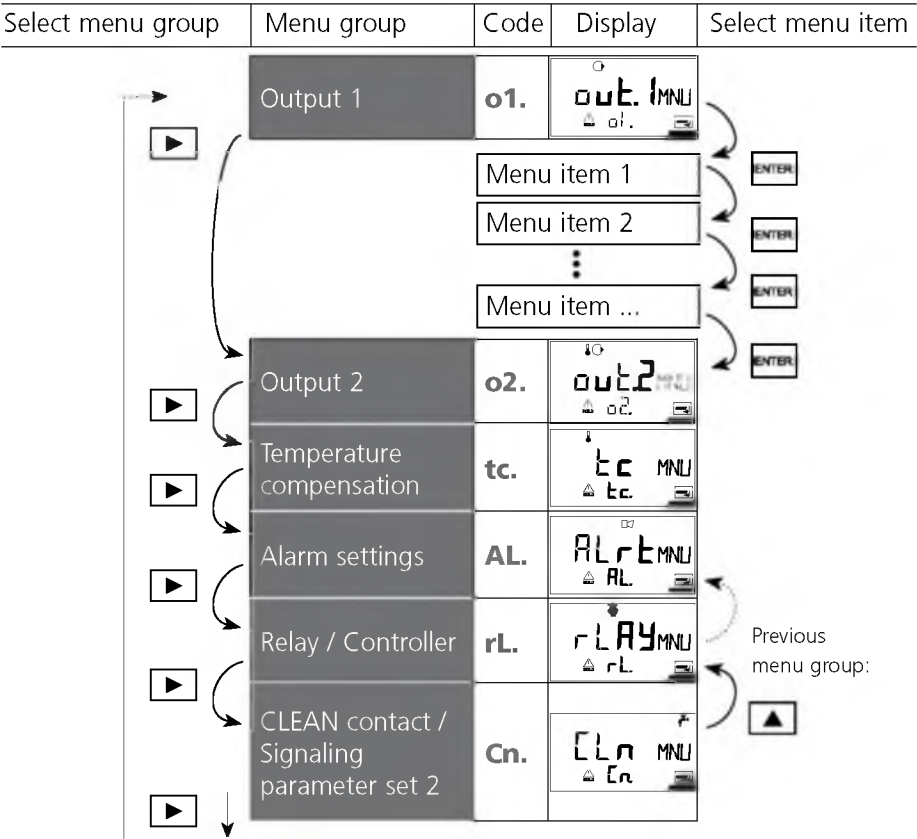

Hold  During configuration the device remains in the Hold mode.	    HOLD icon	The output current is frozen (at its last value or at a preset fixed value, depending on the configuration), limit and alarm contacts are inactive. The controller is in the configured state, Sensoface is off, "Configuration" mode indicator is on.
---	---	--

Input errors		The configuration parameters are checked during the input. In the case of an incorrect input "Err" is displayed for approx. 3 sec. The incorrect parameters cannot be stored. Input must be repeated.
--------------	--	---

End	 	End with <b>CONF</b> . The measured value and Hold are displayed alternately, "ENTER" flashes. Press <b>ENTER</b> to end the Hold mode. The measured value is displayed. The output current remains frozen for another 20 sec (HOLD icon on, "hourglass" flashes).
-----	--	--

Menu structure of configuration

The configuration steps are assigned to different menu groups. With the arrow keys you can jump between the individual menu groups. Each menu group contains menu items for setting the parameters. Pressing **ENTER** opens a menu item. The values are edited using the arrow keys. Pressing **ENTER** confirms/stores the settings. Return to measurement: Press **CONF**.

Example:

Measurement ranges for sulphuric acid

## Concentration curves / ranges

(See Appendix: Concentration curves / ranges)

The concentration curves of many substances show a maximum. This means that if the substance concentration continues to increase and the temperature remains constant, the conductivity will drop. Therefore, a one-to-one correlation of values is only possible in defined ranges.

These partial ranges must be selected as measurement ranges in the configuration.

# Configuration

## Output 1

### Output current range. LIN/LOG characteristic

#### LIN characteristic: Current start / end

- 2 Enter mode code **1200**.
- 3 Select **Output 1** menu group using arrow keys. All items of this menu group are indicated by the code "o1."
- 4 Press **ENTER** to select menu, edit with arrow keys (see Pg 37). Confirm (and proceed) with **ENTER**.
- 5 End: Press **CONF**, then **ENTER**.

Code	Display	Action	Choices
o1.		With <b>LOG</b> selected: • Enter current start (lower end of scale). Select with ► key, edit number with ▲ key, proceed with <b>ENTER</b> .	<b>0.1 mS</b> (0.001 mS 0.01 mS 1.0 mS 10 mS 100 mS 1000 mS)
		• Enter current end (upper end of scale). Select with ► key, edit number with ▲ key.  Proceed with <b>ENTER</b>	<b>100 mS</b> (0.001 mS 0.01 mS 1.0 mS 10 mS 100 mS 1000 mS)

Example: Measurement range over 3 decades

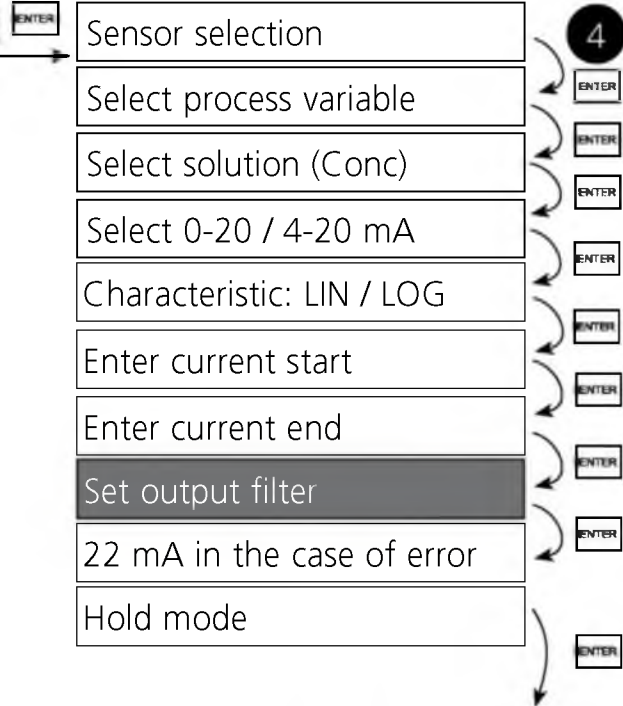

# Configuration

## Output 1

### Time constant of output filter

Output 1:

Code	Display	Action	Choices
<b>o1.</b>		Time constant of output filter Default setting: 0 s (inactive). To specify a time constant: Select with ► key, edit number with ▲ key, proceed with <b>ENTER</b>	<b>0 sec</b> 0 ... 120 sec

**Time constant of output filter (attenuation)**

To smoothen the current output, a low-pass filter with adjustable filter time constant can be switched on. When there is a jump at the input (100 %), the output level is at 63 % after the time constant has been reached. The time constant can be set from 0 to 120 sec. If the time constant is set to 0 sec, the current output follows the input.

**Note:**

The filter only acts on the current output, not on the display, the limit values, or the controller!

# Configuration

## Output 1

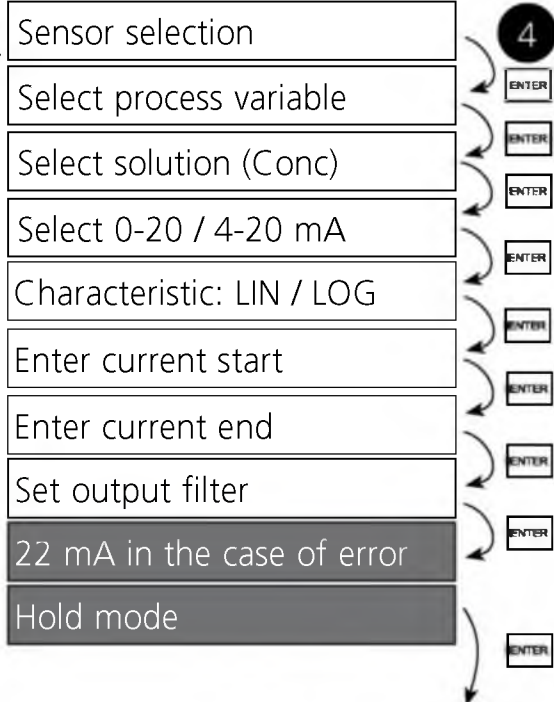

### Output current during Error and HOLD.

Output 1:

- 1 Press **CONF** key.
- 2 Enter mode code **1200**.
- 3 Select **Output 1** menu group using arrow keys. All items of this menu group are indicated by the code "o1."
- 4 Press **ENTER** to select menu, edit with arrow keys (see Pg 41). Confirm (and proceed) with **ENTER**.
- 5 End: Press **CONF**, then **ENTER**.

Code	Display	Action	Choices
o1.		22 mA signal for error message Select with ► arrow key. Proceed with <b>ENTER</b>	<b>OFF</b> (OFF ON)
		Output signal during HOLD LAST: During HOLD the last measured value is maintained at the output FIX: During HOLD a value (to be entered) is maintained at the output Select with ► arrow key. Proceed with <b>ENTER</b>	<b>LAST</b> (LAST FIX)
	 	Only with FIX selected: Enter current which is to flow at the output during HOLD. Select position with ► arrow key and edit number with ▲ key. Proceed with <b>ENTER</b>	<b>021.0 mA</b> (00.0 ... 21.0 mA)

Output signal for HOLD:

▶ **Output 2:**

▶ **Temp compensation:**

**Alarm settings:**

4

- 1 Press **CONF** key.
- 2 Enter mode code **1200**.
- 3 Select **Alarm settings** menu group using arrow keys. All items of this menu group are indicated by the code "AL.".
- 4 Press **ENTER** to select menu, edit with arrow keys (see Pg 45). Confirm (and proceed) with **ENTER**.
- 5 End: Press **CONF**, then **ENTER**.

5

Code	Display	Action	Choices								
AL.		Select Sensocheck (Continuous monitoring of sensor properties) Select with ► key. Proceed with <b>ENTER</b>	<b>OFF</b> (ON / OFF)								
		Alarm delay Select with ► key, edit number with ▲ key, proceed with <b>ENTER</b> .	<b>0010 sec</b> (xxxx sec)								
		LED in HOLD mode Select with ► , proceed with <b>ENTER</b>  LED state: <table><tr><td>Setting</td><td>Alarm</td><td>HOLD</td></tr><tr><td>ON</td><td>on</td><td>flashes</td></tr><tr><td>OFF</td><td>flashes</td><td>off</td></tr></table>	Setting	Alarm	HOLD	ON	on	flashes	OFF	flashes	off
Setting	Alarm	HOLD									
ON	on	flashes									
OFF	flashes	off									

**Alarm contact**

The alarm contact is closed during normal operation (N/C). It opens in the case of alarm or power outage. As a result, a failure message is provided even in the case of line breakage (fail-safe behavior). For contact ratings, see Specifications.

Error messages can also be signaled by a 22 mA output current (see Error messages and Configuration Output 1/Output 2).

The operating behavior of the alarm contact is shown in the Operating states table.

The **alarm delay** acts on the LED, the 22 mA signal, and the alarm contact.

# Controller functions

## PID controller

### P controller

Application in integrating systems  
(e.g. closed tank, batch processes).

### PI controller

Application in non-integrating systems  
(e.g. drains).

### PID controller

The additional derivative action compensates for measurement peaks.

## Controller characteristic

## Controller equations

$$\text{Controller output } Y = \underbrace{Y_P}_{\text{P-action}} + \underbrace{\frac{1}{T_R} \int Y_P dt}_{\text{I action}} + \underbrace{T_D \frac{dY_P}{dt}}_{\text{D action}}$$

Proportional action  $Y_P$

$$Y_P = \frac{\text{Setpoint} - \text{Meas. value}}{\text{Meas. range}} * K_C$$

with:

$Y_P$  Proportional action  
 $T_R$  Reset time [s]  
 $T_D$  Rate time [s]  
 $K_C$  Controller gain [%]

## Neutral zone ( $Y=0$ )

Tolerated deviation from desired value.

With the setting "1 mS/cm", for example, a deviation of  $\pm 0.5$  mS/cm from the desired value does not activate the controller.

## Proportional action (Gradient $K_C$ [%])

# Controller functions

## Pulse length / pulse frequency controller

### Pulse length controller (PLC)

The pulse length controller is used to operate a valve as an actuator. It switches the contact on for a time that depends on the controller output. The period is constant. A minimum ON time of 0.5 sec is maintained even if the controller output takes corresponding values.

### Output signal (switching contact) of pulse length controller

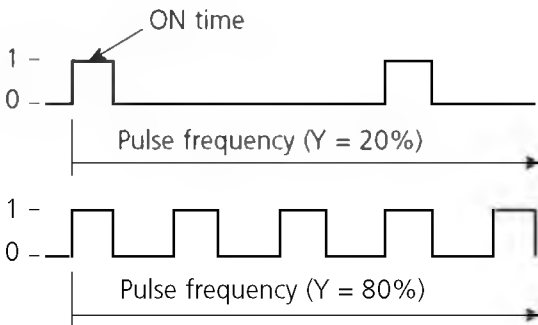

## Pulse frequency controller (PFC)

The pulse frequency controller is used to operate a frequency-controlled actuator (metering pump). It varies the frequency with which the contacts are switched on.

The maximum pulse frequency [pulses/min] can be defined. It depends on the actuator.

The Contact ON time is constant. It is automatically calculated from the user-defined maximum pulse frequency.

## Output signal (switching contact) of pulse frequency controller

# Protective wiring of relay outputs

## Protective wiring of relay contacts

Relay contacts are subjected to electrical erosion. Especially with inductive and capacitive loads, the service life of the contacts will be reduced. For suppression of sparks and arcing, components such as RC combinations, nonlinear resistors, series resistors and diodes should be used.

### Typical AC applications with inductive load

- 1 Load
- 2 RC combination,  
e.g. RIFA PMR 209  
Typical RC combinations  
for 230 V AC:  
Capacitor 0.1  $\mu\text{F}$  / 630 V  
Resistor 100 ohms / 1 W
- 3 Contact

## Typical protective wiring measures

**A:** DC application with inductive load

**B:** AC/DC applications with capacitive load

**C:** Connection of incandescent lamps

A1 Inductive load

A2 Free-wheeling diode, e.g. 1N4007 (Observe polarity)

A3 Contact

B1 Capacitive load

B2 Resistor, e.g. 8 ohms/1 W at 24 V / 0.3 A

B3 Contact

C1 Incandescent lamp, max 60 W / 230 V, 30 W / 115 V

C3 Contact

### Warning!

**Make sure that the maximum ratings of the relay contacts are not exceeded even during switching!**

# Configuration

## Controlling a rinsing probe or signaling parameter set 2

▶ Output 1:

▶ Output 2:

▶ Temp compensation:

▶ Alarm settings:

▶ Limit function:

▶ Contact:

**CLEAN / PSet2**

Select CLEAN / PSet2

Rinsing interval

Rinse duration

Contact response

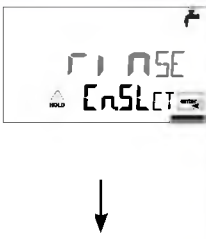

4

5

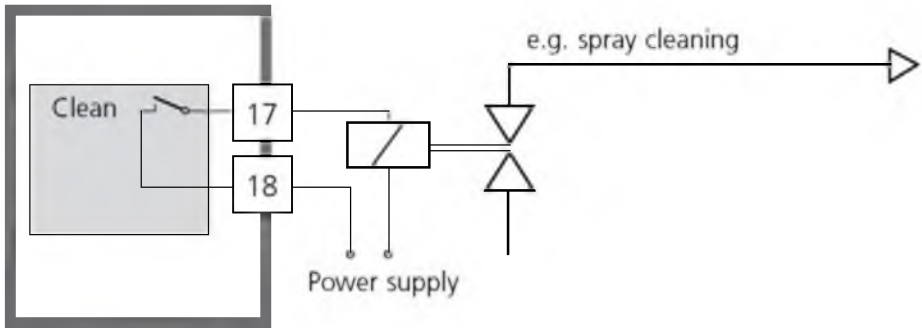

- 1 Press **conf** key.
- 2 Enter mode code **1200**.
- 3 Select **Contact CLEAN / PSet2** menu using arrow keys. All items of this menu group are indicated by the code "Cln."
- 4 Press **enter** to select menu, edit with arrow keys (see Pg 59). Confirm (and proceed) with **enter**.
- 5 End: Press **conf**, then **enter**.

Code	Display	Action	Choices
Cn.		Function selection*: Control of rinsing probe (rinse) Signaling selected parameter set 2 Select with ►, proceed with <b>enter</b>	<b>rinse</b> (rinse / PSet2) For PSet2: see Pg 60
rinse		Rinsing interval * Select with ►, edit number with ▲, proceed with <b>enter</b>	<b>000.0 h</b> (xxx.x h)
		Rinse duration * Select with ►, edit number with ▲, proceed with <b>enter</b> .	<b>0060 sec</b> (xxxx sec)
		Contact response* N/O: normally open contact N/C: normally closed contact Select with ►, proceed with <b>enter</b>	<b>N/O</b> (N/O NC)

\* These parameters are only edited in parameter set 1. They are valid for both parameter sets.

## Controlling a rinsing probe

The “Clean” contact can be used to connect a simple rinsing probe. Rinse time and rinsing interval are defined during configuration. Contact response can be set as N/O, N/C.

Signaling parameter set 2

Depending on the selected parameter set, the relay is active or inactive. The signal can be used for superordinated process control systems.

Parameter set 2 is indicated by "88" in the upper left corner of the display.

	Parameter set 1 selected
	Parameter set 2 selected

Power supply:  
AC < 250 V / < 3 A / < 750 VA  
DC < 30 V / < 3 A / < 90 W

# Selecting parameter set 1/2

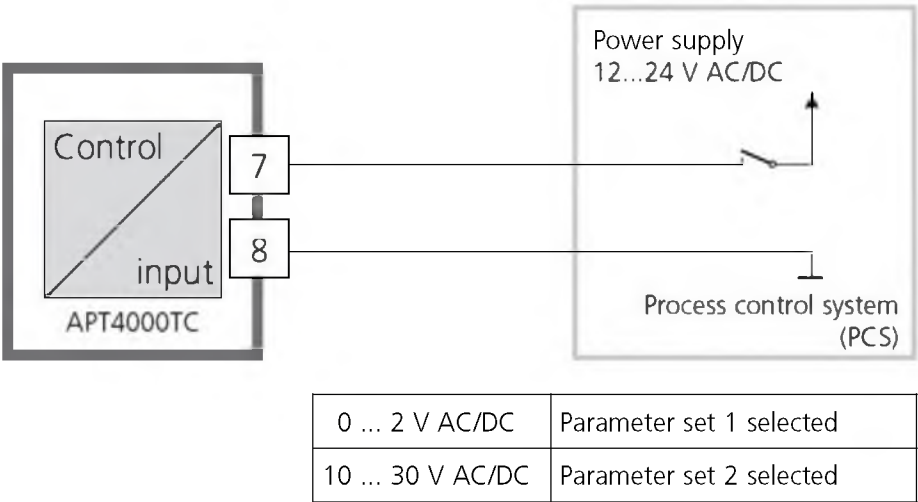

Manually or via a signal at the Control input

Display	Action	Choices
 <p>After correct input a welcome text (CONF) is displayed for approx. 3 sec.</p>	Select parameter set. Press <b>conf</b> , enter code 7654. Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>enter</b> . Wrong settings change the measurement properties! If an invalid code is entered, the device returns to measuring mode.	
  	Select: • Parameter set 1 (MAN) • Parameter set 2 (MAN) • Automatic switchover via Control input (Ctr-EXT) Select with <b>▶</b> , proceed with <b>enter</b>	<b>-1-</b> (-1- MAN -2-MAN Ctr-EXT)  Ctr-EXT: see next page
 	With <b>-1-</b> or <b>-2-</b> selected: Since the complete device configuration is changed in one step, there is a security prompt (No/Yes).  <b>Note:</b> When pressing <b>enter</b> directly, the selection is not stored. Activation of parameter set 2 is indicated by "88" in the upper left corner of the display.	

Display	Action	Choices
	With Control input <b>Ctr-EXT</b> selected: You can switch between the parameter sets by applying an external signal to the Control input see below.	

External switchover of parameter sets

The parameter set can be selected from outside by sending a signal to the Control input (e.g. from the process control system). To do so, **Ctr-EXT** is set during configuration.

Note:

Parameter set 2 is indicated by "88" in the upper left corner of the display.

## Default settings of parameter sets

Two complete parameter sets are stored in the EEPROM. As delivered, the two sets are identical but can be edited.

### Note:

Fill in your configuration data on the following pages.

# Calibration

Calibration adjusts the device to the sensor.

Activate		Activate with <b>CAL</b>
		<p>Enter mode code:</p> <ul style="list-style-type: none"> <li>• Entry of cell factor 1100</li> <li>• With calibration solution 0110</li> <li>• Product calibration 1105</li> <li>• Temp probe adjustment 1015</li> </ul> <p>Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>ENTER</b> key (End with <b>CAL ENTER.</b>)</p>
<p>Hold</p> <p>During calibration the device remains in the Hold mode.</p>	  <p>HOLD icon</p>	<p>Output current is frozen (last value or preset fixed value, depending on configuration), limit and alarm contacts are inactive. The controller is in the configured state, Sensoface is off, "Calibration" mode indicator is on.</p>
Input errors		<p>The calibration parameters are checked during the input. In the case of an incorrect input "Err" is displayed for approx. 3 sec. The incorrect parameters cannot be stored. Input must be repeated.</p>
End	 	<p>End with <b>CAL.</b></p> <p>The measured value and Hold are displayed alternately, "enter" flashes. Press <b>ENTER</b> key to end the Hold mode. The measured value is displayed. The output current remains frozen for another 20 sec (HOLD icon on, "hourglass" flashes).</p>

## Information on calibration

Calibration can be performed by:

- Entry of cell factor
- Determining the cell factor with a known calibration solution taking account of the temperature
- Product calibration
- Zero calibration in air or with calibration solution
- Temperature probe adjustment

### NOTICE

If measurements are taken in containers with  $A < 110$  mm, be sure to choose a container with the same cross-section and the same material (metal/plastic) for calibration.

### NOTICE

- All calibration procedures must be performed by trained personnel. Incorrectly set parameters may go unnoticed, but change the measuring properties.
- When another sensor is used, its sensor data (cell factor, transfer ratio, measuring frequency, temperature probe) must be entered in the configuration menu before calibration.
- Each time a new sensor is connected, the device must be calibrated.

# Calibration by input of cell factor

Input of cell factor with simultaneous display of conductivity and temperature (without temperature compensation)

Display	Action	Remark
	Press <b>CAL</b> key, enter code 1100 Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>ENTER</b> .	If an invalid code is entered, the device returns to measuring mode.
	Ready for calibration  Remove and clean sensor	Display (3 sec) Device in Hold mode, measured value frozen. Sensoface inactive.
 	Enter cell factor: Select with <b>▶</b> key, edit number with <b>▲</b> key. Conductivity and temperature are alternately displayed during the input (lower display). Confirm entry with <b>ENTER</b> .	
	The entered cell factor and zero point are displayed. Confirm with <b>ENTER</b> .	

Display	Action	Remark
	<p>Conductivity and temperature are displayed.</p> <p>The measured value is shown in the main display alternately with "Hold"; "enter" flashes. Press <b>ENTER</b> to end calibration.</p>	<p>After end of calibration, the outputs remain in Hold mode for approx. 20 sec.</p>

## Calibration with calibration solution

Be sure to use known calibration solutions and the respective temperature-corrected conductivity values (see Appendix: Calibration solutions). During the calibration procedure the temperature should be kept constant.

Display	Action	Remark
	Press <b>CAL</b> key, enter code 0110 Select with ► key, edit number with ▲ key, proceed with <b>ENTER</b> .	If an invalid code is entered, the device returns to measuring mode.
	Ready for calibration  Remove and clean sensor	Display (3 sec) Device in Hold mode, measured value frozen. Sensoface inactive.
	Immerse sensor in calibration solution. Enter the temperature-corrected conductivity value of the calibration solution: Select with ► key, edit number with ▲ key. Cell factor and temperature are alternately displayed in the lower display. Confirm entry with <b>ENTER</b> .	When there has not been an entry for 6 sec, the lower display alternately shows the conductivity and temperature value.

Display	Action	Remark
	The determined cell factor and zero point are displayed. Confirm cell factor with <b>ENTER</b> .	
	Conductivity and temperature are displayed. The measured value is shown in the main display alternately with "Hold"; "enter" flashes. Press <b>ENTER</b> to end calibration.	After end of calibration, the outputs remain in Hold mode for approx. 20 sec.

## Product calibration

### Calibration by sampling

The measurement process is only interrupted briefly. During product calibration the sensor remains in the process. Calibration is without TC correction!

**Procedure:** During sampling the currently measured value is stored in the device. The device immediately returns to measuring mode. The calibration mode indicator flashes and reminds you that calibration has not been terminated. The sample is measured in the lab or directly on the site using a portable meter. The measured sample value is then entered in the device. The new cell factor is calculated from these two values.

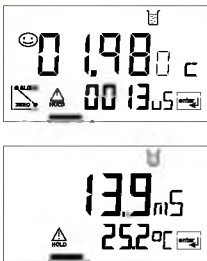

If the sample is invalid, you can take over the value stored during sampling. In that case the old calibration values are stored. Afterwards, you can start a new product calibration.

Display	Action	Remark
	<b>Product calibration step 1:</b> Press <b>CAL</b> key, enter code 1105. (Press <b>►</b> key to select position, enter number using <b>▲</b> key, confirm with <b>ENTER</b> .)	If an invalid code is entered, the device returns to measuring mode.
		Display (approx. 3 sec)
	Take sample and store value. Proceed with <b>ENTER</b>	Now the sample can be measured in the lab.

Display	Action	Remark
	Measuring mode:  From the flashing CAL mode indicator you see that sample calibration has not been terminated.	Until the sample value is determined and can be entered, the device is in measuring mode.
	<b>Product calibration step 2:</b> When the sample value has been determined, call up the product calibration once more ( <b>CAL</b> , code 1105).	Display (approx. 3 sec)
	Enter sample value. The new cell factor is calculated. Confirm with <b>ENTER</b> .	
	The new cell factor and zero point are displayed. Confirm with <b>ENTER</b> .	New calibration: Press <b>CAL</b> .
	The measured value is shown in the main display alternately with "Hold". "enter" flashes. End with <b>ENTER</b> .	After end of calibration, the outputs remain in Hold mode for approx. 20 sec.

# Zero calibration in air

Display	Action	Remark
	Press <b>CAL</b> key, enter code 1001. Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>ENTER</b> .	The device is in the Hold mode. If an invalid code is entered, the device returns to measuring mode.
	Ready for calibration  Remove and clean sensor. (Sensor must be dry!)	Display (3 sec)
 	Modify the zero point until zero is displayed as conductivity value in the lower display.  Select with <b>▶</b> key, edit number with <b>▲</b> key.  If required, change the sign of the zero point.  Press <b>ENTER</b> to confirm the zero point.	When there has not been an entry for 6 sec, the lower display alternately shows the conductivity and temperature value.

Display	Action	Remark
	<p>The cell factor and zero point are displayed. Press <b>ENTER</b> to confirm the calibration data.</p> <p>Conductivity and temperature are displayed.</p> <p>Place sensor in process.</p>	
	<p>The measured value is shown in the main display alternately with "Hold"; "enter" flashes. End calibration with <b>ENTER</b>.</p>	<p>After end of calibration, the outputs remain in Hold mode for approx. 20 sec.</p>

# Zero calibration with calibration solution

Calibration solution with low conductivity

Display	Action	Remark
	Press <b>CAL</b> key, enter code 1001. Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>ENTER</b> .	The device is in the Hold mode. If an invalid code is entered, the device returns to measuring mode.
	Ready for calibration  Remove and clean sensor	Display (3 sec)
	Immerse sensor in calibration solution. Modify the value until the lower display shows the conductivity value of the calibration solution. Press <b>ENTER</b> to confirm calibration.	When there has not been an entry for 6 sec, the lower display alternately shows the conductivity and temperature value.
	The cell factor and zero point are displayed. Press <b>ENTER</b> to confirm the calibration data.	

Display	Action	Remark
	Conductivity and temperature are displayed. Remove the sensor from the calibration solution and clean it. Place sensor in process.	
	The measured value is shown in the main display alternately with "Hold". "enter" flashes. End calibration with <b>ENTER</b> .	After end of calibration, the outputs remain in Hold mode for approx. 20 sec.

# Temperature probe adjustment

Display	Action	Remark
	Activate calibration (Press <b>CAL</b> , enter 1015) Select with ► key, edit number with ▲ key, proceed with <b>ENTER</b> .	Wrong settings change the measure- ment properties! If an invalid code is entered, the device returns to measuring mode.
	Ready for calibration	Display (approx. 3 sec) The device is in the Hold mode.
	Measure the temperature of the process medium using an external thermometer. Enter measured temperature value: Select with ► key, edit number with ▲ key, proceed with <b>ENTER</b> . End adjustment with <b>ENTER</b> . HOLD will be deactivated after 20 sec.	Default: Value of secondary display.

## Measurement

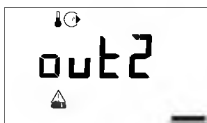

Display	Remark
	In the measuring mode the main display shows the configured process variable (conductivity [mS/cm, S/m] or resistivity [MΩ·cm] or concentration [% by wt] or salinity [SAL]) and the lower display the temperature. During calibration you can return to measuring mode by pressing the <b>CAL</b> key, during configuration by pressing <b>CONF</b> , then <b>ENTER</b> .

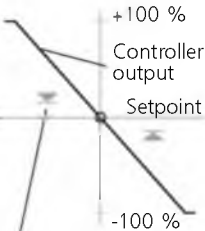

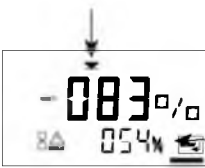

Display	Remark
	<p><b>Display of output currents</b> Press <b>ENTER</b> while in measuring mode. The current at output 1 is shown in the main display, the current at output 2 in the secondary display. After 5 sec the device returns to measuring mode.</p>
	<p><b>Display of calibration data (Cal Info)</b> Press <b>CAL</b> while in measuring mode and confirm code 0000. The current cell factor is shown in the main display, the zero point in the secondary display. After 20 sec the device returns to measuring mode. (Immediate return at pressing <b>ENTER</b>.)</p>
	<p><b>Sensor monitor for validation</b> of sensor and complete measured-value processing. Loop a defined sensing resistor (e.g. <math>R = 100\ \Omega</math>) through the sensor as shown in the figure. Press the <b>CONF</b> key and enter code 2222. The sensor monitor displays the directly measured resistance and the temperature. If there is a significant difference between resistor value and display, the sensor and its transmission behavior should be checked. Press <b>ENTER</b> to return to measurement. <b>Caution:</b> The device does not automatically go to Hold mode.</p>
	<p><b>Display of last error message (Error Info)</b> Press <b>CONF</b> while in measuring mode and confirm code 0000. The last error message is displayed for approx. 20 sec. After that the message will be deleted (immediate return to measurement at pressing <b>ENTER</b>).</p>

# Diagnostics functions

These functions are used for testing the connected peripherals.

Display	Remark
 	<p><b>Specify current at output 1 (current source 1)</b></p> <ul style="list-style-type: none"><li>Press <b>CONF</b>, enter code 5555</li></ul> <p>The current indicated in the main display for output 1 can be edited.</p> <p>Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>ENTER</b>. The actually measured current is shown in the secondary display. The device is in the Hold mode. Press <b>ENTER</b> to return to measurement (Hold remains active for another 20 sec).</p>
 	<p><b>Specify current at output 2 (current source 2)</b></p> <ul style="list-style-type: none"><li>Press <b>CONF</b>, enter code 5556</li></ul> <p>The current indicated in the main display for output 2 can be edited.</p> <p>Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>ENTER</b>. The actually measured current is shown in the secondary display. The device is in the Hold mode. Press <b>ENTER</b> to return to measurement.</p>
   Select a relay  Test 0/1  Return to meas.	<p><b>Relay test (manual test of contacts)</b></p> <ul style="list-style-type: none"><li>Press <b>CONF</b>, enter code 5557</li></ul> <p>The relays are frozen. This state is indicated in the display. The 4 digits in the display correspond to the 4 relays (as on terminal plate):</p> <p>1st digit: R1 2nd digit: R2 3rd digit: AL 4th digit: CLN</p> <p>Function test using arrow keys – see left column.</p> <p>When exiting the function (<b>ENTER</b>), the relays are set corresponding to the measured value.</p>

Display	Remark
	<b>Controller test (manual specification of controller output)</b> <ul style="list-style-type: none"><li>Press <b>CONF</b>, enter code 5559.</li></ul>
	After function activation "Ctrl" is displayed for approx. 3 sec. With controller turned off, "OFF" is displayed in addition, then return to measuring mode.
<p><b>Controller characteristic</b></p>  <p>The arrows indicate which relay (valve) is active:</p> <ul style="list-style-type: none"><li>▲ Relay 2 active (Meas. value &lt; setpoint)</li><li>▼ Relay 1 active (Meas. value &gt; setpoint)</li></ul>	The function is used to start up control loops or check the actuators. For bumpless changeover to automatic operation (exiting this function), configure an I-action component (reset time).
	Specify value: Select with ► key, edit number with ▲ key, proceed with <b>ENTER</b> .
	The device is in Hold mode. Press <b>ENTER</b> to return to measurement (Hold remains active for another 20 sec).
	Momentary controller output (adjusted value has not been stored yet)

ERR 34			Sensoface active			
	 	Temperature outside conversion tables (TC, conc, SAL)	Sensoface active			

# Sensoface

The little smiley in the display (Sensoface) alerts to sensor problems (defective sensor, defective cable). The conditions for a friendly, neutral, or sad Sensoface are summarized in the following chart. Additional icons refer to the error cause.

## Sensocheck

Continuously monitors the primary coil and its lines for short circuits and the secondary coil and its lines for open circuits. Critical values make the Sensoface “sad” and the corresponding icon flashes:

The Sensocheck message is also output as error message Err 33. The alarm contact is active, the red LED is lighted, output current 1 is set to 22 mA (when configured correspondingly). Sensocheck can be switched off during configuration (then Sensoface is also disabled). Exception: After a calibration a smiley is always displayed for confirmation.

## Note

The worsening of a Sensoface criterion leads to the devaluation of the Sensoface indicator (Smiley becomes “sad”). To reset the Sensoface indicator, the defect must be remedied and the device be calibrated.

Display	Problem	Status
	Sensor defect	 Short circuit in primary coil Open circuit in secondary coil (also see Error messages Err 33 and Err 34).
	Temperature error	 Temperature outside range for TC, conc, SAL

**Product line and accessories**

## **HOLD input**

Function

Switching voltage

Galv. separated (OPTO coupler)

Switches device to HOLD mode

0 ... 2 V (AC/DC)      Hold inactive

10 ... 30 V (AC/DC)    Hold active

## **CONTROL input**

Function

Switching voltage

Galv. separated (OPTO coupler)

Switch-over to second parameter set

0 ... 2 V (AC/DC)      Parameter set 1

10 ... 30 V (AC/DC)    Parameter set 2

## **Output 1**

Measured variable\*

Characteristic

Overrange \*

Output filter \* (attenuation)

Measurement error <sup>1)</sup>

Start/end of scale

Min. span

0/4 ... 20 mA, max. 10 V, floating

(galv. connected to output 2)

Conductivity, concentration, or salinity

Linear or logarithmic

22 mA in the case of error messages

Low-pass, filter time constant 0 ... 120 sec

< 0.3% current value + 0.05 mA

As desired within range

LIN: 5 % of selected range

LOG: 1 decade

## **Output 2**

Process variable

Overrange \*

Output filter \* (attenuation)

Measurement error <sup>1)</sup>

Start/end of scale \*

Admissible span

0/4 ... 20 mA, max. 10 V, floating

(galv. connected to output 1)

Temperature

22 mA in case of temp error messages

Low-pass, filter time constant 0 ... 120 sec

< 0.3% current value + 0.05 mA

-20 ... 200 °C / -4 ... 392 °F

20 ... 320 K (36 ... 608 °F)

## **Alarm contact**

Contact ratings

Contact response

Alarm delay

Relay contact, floating

AC < 250 V / < 3 A / < 750 VA

DC < 30 V / < 3 A / < 90 W

N/C (fail-safe type)

0000 ... 0600 sec

## Limit values

Output via relay contacts R1, R2  
Contacts R1, R2 floating but inter-connected

Contact ratings	AC < 250 V / < 3 A / < 750 VA DC < 30 V / < 3 A / < 90 W
Contact response*	N/O or N/C
Delay*	0000 ... 9999 sec
Switching points*	As desired within range
Hysteresis*	0 ... 50 % full scale

## PID process controller

Output via relay contacts R1, R2  
(see limit values)

Setpoint specification*	Within selected range
Neutral zone*	Max. 50 % of selected range
Proportional action*	Controller gain $K_C$ : 0010 ... 9999 %
Integral action*	Reset time $T_R$ : 0000 ... 9999 sec (0000 sec = no integral action)
Derivative action*	Rate time $T_D$ : 0000 ... 9999 sec (0000 sec = no derivative action)
Controller type*	Pulse length or pulse frequency controller
Pulse period*	0001 ... 0600 sec, min. ON time 0.5 sec (pulse length controller)
Max. pulse frequency*	0001 ... 0180 min <sup>-1</sup> (pulse frequency controller)

## Cleaning function / Parameter set 2\*

### Clean / PSet2

Relay contact, floating, for controlling a rinsing probe or signaling parameter set 2

Contact ratings	AC < 250 V / < 3 A / < 750 VA DC < 30 V / < 3 A / < 90 W
Contact response	N/O when signaling parameter set 2 N/O or N/C when used as cleaning contact*
Rinsing interval*	000.0 ... 999.9 h (000.0 h = cleaning function switched off)
Rinse duration*	0000 ... 1999 sec

# Specifications

## Display

Main display	LC display, 7-segment with icons
Secondary display	Character height 17 mm, unit symbols 10 mm
Sensoface	Character height 10 mm, unit symbols 7 mm
	3 status indicators (friendly, neutral, sad smiley)
Mode indicators	5 mode indicators "meas", "cal", "alarm", "cleaning", "config"
	18 further icons for configuration and messages
Alarm indication	Red LED in case of alarm or HOLD, user defined

## Keypad

5 keys: [CAL] [CONF] [▶] [▲] [ENTER]

## Service functions

Current source	Current specifiable for output 1 and 2 (00.00 to 22.00 mA)
Manual controller	Controller output entered directly (start of control process)
Device self-test	Automatic memory test (RAM, FLASH, EEPROM)
Display test	Display of all segments
Last Error	Display of last error occurred
Sensor monitor	Validation of sensor and complete measured-value processing (display: resistance / temperature)
Relay test	Manual control of the four switching contacts

## Parameter sets\*

Two selectable and configurable parameter sets for  
different process phases  
Switchover via CONTROL input or manually  
Signaling via relay contact PSet2

## Data retention

Parameters and calibration data > 10 years  
(EEPROM)

## Protection against electric shock

Safe electrical isolation of all extra-low-voltage  
circuits against mains by double insulation to  
EN 61010-1

## Power supply

24 (-15%) ... 230 V AC/DC (+10%);  
approx. 5 VA; 2.5 W  
AC: 45 ... 65 Hz;  
Overvoltage category II, Class II

## Nominal operating conditions

Ambient temp:	-20 ... +55 °C
Transport/Storage temp	-20 ... +70 °C
Relative humidity	10 ... 95% not condensing
Power supply	24 (-15%) ... 230 V AC/DC (+10%)
Frequency for AC	45 ... 65 Hz

## EMC

	EN 61326
Emitted interference	Class B (residential area) Class A for mains > 60 V DC
Immunity to interference	Industry

## Explosion protection

<b>FM:</b>	NI Class I Div 2 Group A, B, C & D, T4 Ta = 55 °C; Type 2 NI Class I Zone 2-Group IIC, T4 Ta = 55°C; Type 2
<b>CSA:</b>	Class I Div 2 Groups A, B, C and D, T4 Ex nA IIC T4

## Enclosure

	Molded enclosure made of PBT (polybutylene terephthalate)
Color	Bluish gray RAL 7031
Mounting	<ul style="list-style-type: none"> <li>• Wall mounting</li> <li>• Pipe mounting: Ø 40 ... 60 mm, □ 30 ... 45 mm</li> <li>• Panel mounting: cutout 138 x 138 mm (DIN 43700)</li> <li>• Sealed against panel</li> </ul>
Dimensions	H 144 mm, W 144 mm, D 105 mm
Ingress protection	IP 65 / NEMA 4X
Cable glands	3 knockouts for cable glands M20x1.5 2 knockouts for NPT 1/2" or rigid metallic conduit
Weight	Approx. 1 kg

---

\*) User-defined

1) To IEC 746 Part 1, at nominal operating conditions

2) ± 1 count

3) Plus sensor error

<b>NaCl</b> Configura- tion	0-26 % by wt (0 °C) 0-28 % by wt (100 °C) <b>-01-</b>		
<b>HCl</b> Configura- tion	0-18 % by wt (-20 °C) 0-18 % by wt (50 °C) <b>-02-</b>	22-39 % by wt (-20 °C) 22-39 % by wt (50°C) <b>-07-</b>	
<b>NaOH</b> Configura- tion	0-13 % by wt (0 °C) 0-24 % by wt (100 °C) <b>-03-</b>	15-50 % by wt (0 °C) 35-50 % by wt (100 °C) <b>-10-</b>	
<b>H<sub>2</sub>SO<sub>4</sub></b> Configura- tion	0-26% by wt (-17°C) 0-37% by wt (110°C) <b>-04-</b>	28-88% by wt (-17°C) 39-88% by wt (115°C) <b>-09-</b>	94-99% by wt (-17°C) 89-99% by wt (115°C) <b>-06-</b>
<b>HNO<sub>3</sub></b> Configura- tion	0-30 % by wt (-20 °C) 0-30 % by wt (50°C) <b>-05-</b>	35-96 % by wt (-20 °C) 35-96 % by wt (50°C) <b>-08-</b>	

For the solutions listed above, the device can determine the substance concentration from the measured conductivity and temperature values in % by wt. The measurement error is made up of the sum of measurements errors during conductivity and temperature measurement and the accuracy of the concentration curves stored in the device.

We recommend to calibrate the device together with the sensor. For exact temperature measurement, you should perform a temperature probe adjustment. For measuring processes with rapid temperature changes, a separate temperature probe with fast response should be used.

When measuring processes such as dilution or intensification of CIP solutions (Clean-In-Place), it is helpful to switch between the parameter sets for measuring the process medium and for measuring the CIP solution.

## -01- Sodium chloride solution NaCl

Concentration measurement not possible in this range.

Conductivity in dependence on substance concentration and process temperature for sodium chloride solution (NaCl)

# Concentration curves

-02- Hydrochloric acid HCl

-07-

Concentration measurement not possible in this range.

Conductivity in dependence on substance concentration and process temperature for hydrochloric acid (HCl)

Source: Haase/Sauermann/Dücker; Z. phys. Chem. New Edition, Vol. 47 (1965)

-03- Sodium hydroxide solution NaOH  
-10-

Concentration measurement not possible in this range.

Conductivity in dependence on substance concentration and process temperature for sodium hydroxide solution (NaOH)

# Concentration curves

-04- Sulphuric acid  $\text{H}_2\text{SO}_4$

-06-

-09-

Concentration measurement not possible in this range.

Conductivity in dependence on substance concentration and process temperature for sulfuric acid ( $\text{H}_2\text{SO}_4$ )

Source: Darling; Journal of Chemical and Engineering Data; Vol.9 No.3, July 1964

## -05- Nitric acid $\text{HNO}_3$

-08-

Concentration measurement not possible in this range.

Conductivity in dependence on substance concentration and process temperature for nitric acid ( $\text{HNO}_3$ )

Source: Haase/Sauermann/Dücker; Z. phys. Chem. New Edition, Vol. 46 (1965)
