## КОНТРОЛЛЕРЫ

Технические характеристики  
на DCP50, DCP551, DCP250

# DCP50 Digital Controller Programmer

# Specification

## Overview

The DCP50 is a microprocessor-based 1/16 DIN controller programmer that combines a high degree of functionality and reliability at a low price. It is capable of supporting up to 4 program profiles with up to 16 segments per profile. It is fully dedicated to monitor and control temperatures, pressures and levels in a wide range of applications such as the plastics and food industries, furnaces, packaging and environmental chambers. The large and easy-to-read dual 4-digit display and tactile keypad make the DCP50 easy to configure and use. It's outstanding flexibility enables you to configure any unit for any application and change it if required.

## Features

### Dual Display

Two 4-digit displays with 7 LED segments, each configurable for:

- PV and SP (non adjustable)
- PV and SP (adjustable)
- PV and Ramping SP
- PV only

### Programs / Segments

A maximum of 4 program profiles can be stored and up to 16 segments can be programmed to each profile.

### Easy to Configure

Two different configuration levels (configuration mode and set-up mode) provide easy access to parameters. A 4-digit security code prevents unauthorized changes.

### Moisture Resistant Front-face

Meets NEMA 3 / IP65 front-face protection against dust and water.

### Universal Input

Accepts seven different types of thermocouples, RTDs, current and volt linear inputs. All inputs are configurable as standard.

### Universal Power Supply

The DCP50 can operate on any line voltage from 90 Vac to 264 Vac at 50/60 Hz continuously. A 24/48 Vac/dc model is available as an option.

### PC Software Tools

PC-based software is available for ease of configuration and monitoring.

### Easy Output Selection and Upgrade

With only three basic modules (current, triac, and relay output) and plug-in options, you can configure the controller as you want for a wide range of applications.

### Up to Three Outputs

The DCP50 provides up to three outputs for time and current proportioning, duplex mode (heat/cool), PV or SP retransmission, and events.

### Event Strategy

Two soft event alarms on PV, deviation high/low/absolute. A special loop alarm is also provided to detect faults in the control loop by continuously analyzing the PV response to the control output. Alarm inhibit is available on power up and setpoint switching.

### Manual/Automatic Mode

If enabled via configuration, Manual control (via bumpless transfer) is enabled by simply pressing the front-face SETUP key.

### Pre-tuning and Self-tuning Strategy

Pre-tuning is used to set up the PID parameters close to the optimum values which might be used by the self-tuning algorithm to subsequently optimize the tuning parameters.

### Guaranteed Soak

Guaranteed soak feature allows the profile to sense if the PV is in range of the end of a ramp before starting a soak.

### Profile Recovery and Cycling

Profile recovery feature allows a 'cold start' or 'warm start'. Profile cycling provides a range from 'no cycling' to 'infinite cycling'.

**Digital Input**

The digital input option allows remote run / hold capability.

**Communication**

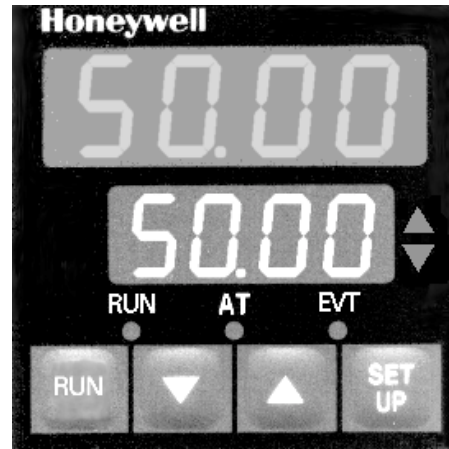

An optional RS485 communications interface provides a link between up to 32 units and a host computer through Modbus RTU protocol at up to 9600 baud.

**Highly Secure**

A non-volatile memory based on EEPROM technology ensures data integrity during loss of power supply, with retention of more than 100 years. The design is centered around a battery concept. A 4-digit security code prevents unauthorized or accidental change.

UPPER DISPLAY - Four characters dedicated to show the PV. In configuration mode, it shows the parameter value or selection.

LOWER DISPLAY - Four characters dedicated in normal operation to display the setpoint. In configuration mode, it displays the parameter name.

RUN - LED indicates that the programmer is in the run mode.

AT - LED indicates that the controller is in self-tune mode. When flashing, controller is in pre-tune mode.

EVT - LED informs that event is on.

**Optional Features**

The following can be selected via the Model selection Guide (see page 7):

- RS485 Modbus RTU communication
- Digital Input (remote RUN/HOLD)
- Output 2
- Output 3
- Power Supply 24/48 Vac/dc

**Physical Description**

The DCP50 controller programmer is housed in a 110 mm (4.33 inches) deep case with the standard gray bezel. It can be mounted in a 1/16 DIN panel cutout. By using the pre-assembled mounting fixture delivered with the unit, you can easily and securely install the controller into the panel cutout. Modular plug-in construction allows rapid access and saves time. All inputs and outputs are connected on the rear terminal block by screws.

**Operator Interface**

Four display combinations are offered to the operator. The upper 4-digit 7-segment display is always dedicated to monitor the PV. The lower display can show:

- SETPOINT (read only)
- SETPOINT (adjustable)
- RAMPING setpoint (ramp mode)
- BLANK

Figure 2 — Operator Interface

**Key functions**

Selects run or hold mode, can also abort program.

Allows operator mode parameters to be scrolled. In combination with the "Upper" key, allows configuration mode or set-up mode to be entered.

Increases setpoint, output or configuration parameter values.

Decreases setpoint, output or configuration parameter values.

## Universal Inputs

All input types are available on any unit. By positioning a jumper on the CPU board, the thermocouples, RTDs or linear input families can be field selected. Selection among the various types of inputs is made by prompt configuration. As soon as the Process Variables reaches a value of the input range limits, the controller displays a message. A sensor break indication is also provided. A configurable digital filter is available from 0.5 seconds to 100.0 seconds.

## Outputs

Four types of outputs (Relay, Solid State Relay Driver, Solid State Triac, or Linear) are selectable for three outputs, through the model selection guide or by adding a plug-in module for outputs 2 and 3.

## Output Algorithms

The DCP50 is available with the following output algorithms:

- *Time proportional:*  
ON/OFF or time proportional with electromechanical relay SPDT 2 A, solid state relay (SSR) driver (open collector), or solid state (SS) Triac.
- *Current proportional:*  
Supply directly proportional current or volt signal to the final control elements which require 0-20 mA, 4-20 mA, 0-10 V or 0-5 V.
- *Time proportional duplex:*  
Three duplex modes can be selected, either ON/OFF duplex or time proportional duplex (heat/cool with two proportional bands, two cycle times and deadband).
- *Current proportional duplex:*  
In addition to the first current/volt output, provides a second similar output with its own proportional band.
- *Current/Time or Time/Current duplex:*  
Provides a variation of traditional time or current duplex mode by mixing current and time proportioning together.

## Control Algorithms

Three control algorithms can be set up through the configuration menu:

- On/Off
- PID
- PD + MR

## Configuration

There are two levels of configuration. The SET-UP mode allows modification of current parameters such as tuning parameters, event alarm values, setpoint limit, ramp enable, auto-manual mode enable, auto pre-tune enable.

The CONFIGURATION mode is more oriented to unit personality: input selection, output 2 and 3 usage, event alarm type, communication address, lockout code, hardware definition coding.

## Control Mode

In the base mode with no program running or held, Manual control may be selected via the Set Up key. Manual or automatic mode with bumpless transfer is standard feature. In manual mode, the operator can directly control the output through the two front face keys (raise and lower keys). The output value is monitored on the lower display.

## Event Alarms

Outputs 2 and 3 can be used as event alarms. Two electromechanical single pole double throw relays can activate external equipment when event alarm setpoints are reached. An LED is also activated on the front-face. A direct or reverse acting event alarm output can be configured. A logical combination of the two event alarms: OR, AND or hysteresis (active when both event alarms are active, becomes inactive when both event alarms are inactive) can be set which associates the two event alarms status before energizing the relay. In order to detect a defective control loop, the controller can supply a special loop alarm control by continually monitoring the PV response to output demand. A timer is automatically set up when any output is on saturation mode. When the timer reaches twice the reset time with no PV response, then the loop alarm is activated. With this soft alarm, there is no need for a heater breaker, saving wiring time and costs.

## Display

Dual, four-digit LED display with decimal point location configurable up to three places for linear ranges only.

## PC Software Tools

The optional DCP50 Support Software kit provides a Windows-based configuration tool and a special hardware connector. The connector uses the serial port on a PC along with a standard connector on the underside of the DCP50 Programmer. The "Program Editor" portion of the software allows easy graphical set up of the setpoint profiles and features upload/download of programs, save program information to disk, and create hard copy of profile information. The "Configurator" portion of the software allows instrument configuration. This software does not require the RS485 communications option.

## Specifications

### Technical data

<b>Accuracy</b>	0.25 % of span $\pm$ 1 LSD
<b>Number of Programs</b>	4 maximum
<b>Number of Segments</b>	16 per program maximum
<b>Segment Time</b>	0 to 99 hours 59 minutes; or 0 to 99 minutes 59 seconds (time unit selectable)
<b>Guaranteed Soak</b>	Sets Guaranteed Soak width 0 to 1000 U
<b>Cycle</b>	Sets program count 0 to 9999 or INF (infinite)
<b>Pattern Link</b>	Sets program number 0 to 4 (0: no link)
<b>Temperature Stability</b>	0.01 % of span per °C
<b>Input Signal Failure</b>	<i>Fail-safe output value:</i> Achieved when burnout is detected. Value depends on configuration. <i>For thermocouple and mV input detected by any lead break:</i> Upscale burnout <i>For RTD:</i> Burnout detected by any lead break <i>Current or volt input:</i> Burnout set by open circuit detection
<b>Input Impedance</b>	<i>Volt impedance:</i> 47 Kohms <i>Current input:</i> 4.7 ohms <i>All others:</i> 100 Mohms
<b>Input Sampling Rate</b>	Four samples per second
<b>Input Filter</b>	Digital filter configurable from front panel 0.0 (Off), from 0.5 seconds to 100.0 seconds in 0.5 seconds increment
<b>Input Resolution</b>	14 bits approximately, always four times better than display resolution
<b>Input Isolation</b>	Universal input isolated at 2500 V from all outputs except SSR and from power supply
<b>Stray Rejection</b>	<i>Common mode rejection:</i> > 120 dB at 50/60 Hz <i>Serial mode rejection:</i> > 500% of span at 50/60 Hz
<b>Approvals</b>	UL, Product design to meet CE MARK requirement
<b>Control Output Type</b>	<p><b>Type available:</b></p> <p><i>Outputs 1 and 2:</i> Linear, Electromechanical relay, Solid state relay drive (open collector), Solid state Triac</p> <p><i>Output 3:</i> Linear (retransmission only), Electromechanical relay, SSR drive (open collector)</p> <p><b>Linear output:</b> 0-20 mA, 4-20 mA, 0-5 V, 0-10 V (field configurable)  <i>Accuracy:</i> <math>\pm</math> 0.5 % (250 ohms for mA, 2 Kohms for volt)  <i>Resolution:</i> 80 bits in 250 ms (10 bits in 1 second typical &gt;10 bits in &gt;1 second)  <i>Load impedance:</i> 500 ohms max current output, 500 ohms min volt output  <i>Isolation:</i> Isolated 2500 V from all other inputs and outputs  <i>Range selection method:</i> Jumper positioning and front panel code setting  <i>Temperature stability:</i> 0.01 % / °C</p> <p><b>Electromechanical relay:</b> SPDT contact  <i>Resistive load:</i> 2 A at 120 V or 240 V  <i>Life time:</i> &gt; 500000 operations at rated voltage/current</p> <p><b>Solid state relay drive/TTL:</b>  <i>Drive capability:</i> SSR &gt; 4.3 Vdc into 250 ohms minimum  <i>Isolation:</i> Not isolated from input and other SSR output</p> <p><b>Solid state Triac:</b>  <i>Operating voltage range:</i> 20-28 Vrms (47-63 Hz)  <i>Current rating:</i> 0.01-1 A (full cycle rms on-state @ 25 °C)  <i>Maximum non-repetitive surge current (16.6ms):</i> 25 A peak  <i>OFF-state min. dv/dt &amp; max. leakage @ rated voltage:</i> 500 V/<math>\mu</math>s and 1mA rms  <i>OFF-state repetitive peak voltage, Vdrm:</i> 600 V minimum  <i>ON-state max. voltage drop @ rated current:</i> 1.5 V peak</p>

<b>Technical data (continued)</b>	
<b>Event Alarms</b>	<p><i>Maximum number of event alarms:</i> 2 soft event alarms setpoint + 1 loop alarm</p> <p>Event alarm inhibit available on power up and setpoint switching</p> <p><i>Event alarm output:</i> Up to two relays or SSR output on outputs 2 and 3</p> <p><i>Types:</i> PV high or low, band, deviation high or low, loop</p> <p><i>Combination event alarms:</i> Logical "OR", "AND" or hysteresis of event alarms available to individual hardware output</p>
<b>Loop Control</b>	<p><i>Automatic tuning type:</i> Pre-tune and self-tune</p> <p><i>Proportional bands:</i> 0 (inactive), 0.5 % to 999.9 % of input span with 0.1% increments. Two proportional bands available for duplex mode</p> <p><i>Reset:</i> Off or from 1s to 99 min 59 s</p> <p><i>Rate:</i> From 0 s to 99 min 59 s</p> <p><i>Manual reset:</i> from 0 to 100 % of output (single output), from -100 % to 100 % of output (dual output)</p> <p><i>Deadband:</i> ± 20 of PB1 + PB2</p> <p><i>ON/OFF hysteresis:</i> 0.1% to 10.0 % of input span</p> <p><i>Auto/manual mode:</i> Front key selectable with bumpless transfer between automatic and manual mode</p> <p><i>Cycle times:</i> Up to two cycle times available for time duplex control</p> <p><i>Selection:</i> 0.5, 1, 2, 4, 8, 16, 32, 64, 128, 256, or 512 seconds</p> <p><i>Setpoint ramp:</i> From 1 to 9999 engineering units per hour</p>
<b>Retransmission Output</b>	Current and volt output of output 3 can be selected to retransmit the process value or setpoint
<b>Communication Interface</b>	<p>RS485 Modbus RTU</p> <p><i>Baud rate:</i> 1200, 2400, 4800 or 9600 baud</p> <p><i>Link characteristics:</i> 32 drops maximum, Modbus protocol, two wires</p>
<b>Mounting</b>	Plug-in with pre-assembled mounting fixture
<b>Wiring Connection</b>	Screw terminals on the rear of the case (combination head)
<b>Power Consumption</b>	4 W
<b>Physical</b>	<p><i>Weight:</i> 210 grams maximum</p> <p><i>Height:</i> 48 mm / 1.89 in</p> <p><i>Width:</i> 48 mm / 1.89 in</p> <p><i>Depth:</i> 110 mm / 4.33 in</p> <p><i>Cut out:</i> 45 mm x 45 mm / 1.77 in x 1.77 in</p>
<b>Environmental</b>	<p><i>EMI Susceptibility:</i> Designed to meet EN55101</p> <p><i>EMI Emission:</i> Designed to meet EN55022</p> <p><i>Safety Considerations:</i> Designed to comply with IEC1010-1as far as applicable</p>
<b>Front Panel Sealing</b>	NEMA 3 / IP65

# DCP250 Single or two loop controller and programmer with graphic display Specification 57-77-03-18

### Introduction

DCP250 is a 1/4 DIN controller programmer with a graphical text display, advanced control capability and modular I/O options providing flexibility to fit a wide range of industrial manufacturing and process applications.

#### Fast and easy front panel setup for simple and advanced control tasks

DCP250 simplifies user setup with a step by step wizard configuration saving working through several menus for initial setup. A logical menu structure for intuitive navigation allows fast changes and updates to individual settings.

#### Configure controllers without connecting to a PC

Configuration files can be downloaded to a controller using a flash memory stick via the front USB port allowing for fast programming. Settings can also be read via the USB port to clone additional devices or configure a replacement. Datalog files can also be extracted locally via the USB for convenient access of process data.

#### Easy access user operation

The DCP250 pages are formatted to show users important process information on a single page, minimizing the steps to access data and settings. A color change green/red LED backlight provides easily recognizable alarm indication to improve response times for corrective action.

#### Comprehensive control ..... and much more

DCP250 includes many features to ensure good control performance on a wide range of applications. Single or dual loop capability in a single device, cascade, valve and ratio enhanced control with support features such as real time clock timer; gain scheduling and profiler ensure DCP250 has the flexibility for process system needs. In addition, datalogging, trending, USB, Ethernet options add even more capability to an already powerful device.

#### Fast configuration via configuration interface

Direct access for programming is available via a top of the controller connection port. The interface provides easy and fast access with Blue Control software to configure the controller or drilldown into process issues with minimal disruption.

Figure 1– DCP250 Controller Programmer

#### Key features

- 1/4 DIN size
- Single or Two Loop (1 or 2 control loops)
- Graphical / Text LCD Display (red/green)
- USB host for configuration (read/write) and logged data (read)
- Profiler 256 segments shared in 64 programs
- Datalogger function with real time clock
- Modbus RS485 or Modbus TCP Ethernet
- Standard CE, UL
- ON/OFF, PID heat only & Heat/Cool, Valve Motor Drive, Ratio Cascade Control
- 255 segment profiler shared in 64 programs
- 5 PID sets for manual or automatic gain scheduling
- 7 Alarms – absolute, deviation, rate of change, sensor break, recorder memory, power
- Ethernet – Modbus TCP, RS485 - Modbus RTU (Master/Slave)
- Up to 2 analog inputs, 9 outputs, remote setpoint input, 9 digital inputs

## Performance Specifications<sup>1</sup>

### UNIVERSAL INPUT 1 AND 2

Sampling Rate: 10 per second.  
 Resolution: Impedance: 16 bits. Always four times better than display resolution.  
 Temp Stability: Supply >10M $\Omega$  resistive, except DC mA (5 $\Omega$ ) and V (47k $\Omega$  ).  
 Variation: Humidity Error <0.01% of span per  $^{\circ}$ C change in ambient temperature.  
 Influence: Process Supply voltage influence negligible within supply limits.  
 Display: Process Negligible if non-condensing.  
 Variable Input Offset: Displays up to 5% over and 5% under span limits.  
 Sensor Break Reading adjustable  $\pm$  Controller Span. +ve values added to Process Variable, -ve values subtracted  
 Detection: from Process Variable  
 Thermocouple & RTD - *Control goes to pre-set power value. High & Sensor Break alarms activate.*  
 Isolation: Linear (4 to 20mA, 2 to 10V & 1 to 5V only) - *Control goes to pre-set power value. Low & Sensor  
 Break alarms activate.*  
 Supported Thermocouple Types & Reinforced safety isolation from outputs and other inputs

N	0 to 1399 $^{\circ}$ C	32 to 2551 $^{\circ}$ F	*
PtRh 20%:40%	0 to 1850 $^{\circ}$ C	32 to 3362 $^{\circ}$ F	
R	0 to 1759 $^{\circ}$ C	32 to 3198 $^{\circ}$ F	
S	0 to 1762 $^{\circ}$ C	32 to 3204 $^{\circ}$ F	
T	-240 to 400 $^{\circ}$ C	-400 to 752 $^{\circ}$ F	*

*Optional decimal place can be displayed on all ranges*

Thermocouple Calibration:

$\pm$ 0.1% of full range,  $\pm$ 1LSD ( $\pm$ 1 $^{\circ}$ C for internal CJC if enabled).  
 Linearization better than  $\pm$ 0.2 $^{\circ}$ C ( $\pm$ 0.05 typical) on ranges marked \* in the table above. Linearization for other ranges is better than  $\pm$ 0.5 $^{\circ}$ C.  
 Supported RTD Types & Ranges: BS4937, NBS125 & IEC584

Type	Range $^{\circ}$ C	Range $^{\circ}$ F
3-Wire PT100	-199 to 800 $^{\circ}$ C	-328 to 1472 $^{\circ}$ F
NI120	-80 to 240 $^{\circ}$ C	-112 to 464 $^{\circ}$ F

*Optional decimal place can be displayed on all ranges*

RTD Calibration:

0.1% of full range,  $\pm$ 1LSD.  
 RTD Excitation: Linearization better than  $\pm$ 0.2 $^{\circ}$ C ( $\pm$ 0.05 typical). PT100  
 Lead Resistance: input to BS1904 & DIN43760 (0.00385 $\Omega$ / $\Omega$ / $^{\circ}$ C).

Supported Linear Types & Ranges:

Sensor current 150 $\mu$ A  $\pm$ 10%.  
 <0.5% of span error for max 50 $\Omega$  per lead, balanced.

Type	Range	Offset Range
mA DC	0 to 20mA DC	4 to 20mA DC
mV DC	0 to 50mV DC	10 to 50mV DC
V DC	0 to 5V DC	1 to 5V DC
V DC	0 to 10V DC	2 to 10V DC
Potentiometer	$\geq$ 100 ohms	N/A

Maximum Overload: DC Calibration:

*Scalable from -2000 to 100000. Decimal point selectable from 0 to 3 places, but rounds to 2 places above 99.999; 1 place above 999.99 and no decimal above 9999.9.*

DC Input Multi-Point Linearization:

1A on mA input terminals, 30V on voltage input terminals.  
 $\pm$ 0.1% of full range,  $\pm$ 1LSD.  
 Up to 15 scaling values can be defined anywhere between 0.1 and 100% of input.

Input Functions:

Function	Input 1	Input 2
Process Control	Loop 1	Loop 2
Cascade Control	Slave Loop	Master Loop
Ratio Control	Controlled Variable	Un-controlled Variable
Remote Setpoint (RSP)	-	RSP on loop 1
Valve Position Feedback	-	Valve on loop 1
<i>RSP Linear inputs only, scalable between -9999 to 10000, but actual setpoint value is kept within the setpoint limit settings</i>		

#### #AUXILIARY INPUT A

Supported Input Types & Ranges:

Type	Range	Offset Range
MA DC	0 to 20mA DC	4 to 20mA DC
V DC	0 to 5V DC	1 to 5V DC
V DC	0 to 10V DC	2 to 10V DC

Accuracy:  $\pm 0.25\%$  of input range  $\pm 1$  LSD.

Sampling Rate: 4 per second.

Resolution: Impedance: 16 bits.

Sensor Break  $> 10M\Omega$  resistive, except DC mA (10 $\Omega$ ) and V (47k $\Omega$ ).

Detection: 4 to 20mA, 2 to 10V and 1 to 5V ranges only. *Control goes to pre-set power value if Aux Input is the active setpoint source.*

Isolation:

Input Function: Reinforced safety isolation from outputs and inputs.

Remote Setpoint (RSP) input, Scalable between  $\pm 0.001$  &  $\pm 10000$ , but always constrained by the setpoint limit settings.

#### DIGITAL INPUTS A & C

Selectable Digital Input Functions:

Function	Logic High*	Logic Low*
Loop 1 Control Select	Enabled	Disabled
Loop 2 Control Select	Enabled	Disabled
Loop 1 Auto/Manual Select	Automatic	Manual
Loop 2 Auto/Manual Select	Automatic	Manual
Loop 1 Setpoint Select	Main SP	Alternate SP
Loop 2 Setpoint Select	Main SP	Alternate SP
Loop 1 Pre-Tune Select	Stop	Run
Loop 2 Pre-Tune Select	Stop	Run
Loop 1 Self-Tune Select	Stop	Run
Loop 2 Self-Tune Select	Stop	Run
Profile Run/Hold	Hold	Run
Profile Hold Segment Release	Release	No Action
Profile Abort	Abort	No Action
Data Recorder Trigger	Not Active	Active
Output <i>n</i> Forcing Open/Close	Open	Closed
Clear All Latched Outputs	No Action	Reset
Output <i>n</i> Clear Latch	No Action	Reset
Key <i>n</i> Mimic (for L D U R)	No Action	Key Pressed
Inputs C1-C7 can be used as Binary or BCD Profile Selection	Binary 0	Binary 1
<i>*The High/Low function can be switched using Inputs to Invert.</i>		

Digital Input Sensitivity: Inputs work in parallel with equivalent menus, either can change function status. Response  $< 0.25$  second.

■ = Level Sensitive: High or low sets status.

= Edge Sensitive: High-Low or Low-High transition changes function. Pre-Tune always off at power on (except auto pre-tune), but others retain their power off status at power on.

Std. Logic State: Open contacts ( $> 5000\Omega$ ) or 2 to 24VDC signal = Logic High

Volt-free (or TTL): Closed contacts ( $< 50\Omega$ ) or -0.6 to +0.8VDC signal = Logic Low.

Inverted Logic: Open contact ( $> 5000\Omega$ ) or 2 to 24VDC signal = Logic Low

Closed contact ( $< 50\Omega$ ) or -0.6 to +0.8VDC signal = Logic High.

Number Available: 0 to 9. One from Module Slot A, 8 from Multi-Digital Input C

Isolation: Reinforced safety isolation from inputs and outputs.

Page 1 of 12

## Specification and Model Selection Guide

### Introduction

The DCP551 is a high-function programmer/controller supporting up to 99 program patterns to which thermocouple, resistance temperature detector (RTD), DC voltage, DC current and other signals can be input.

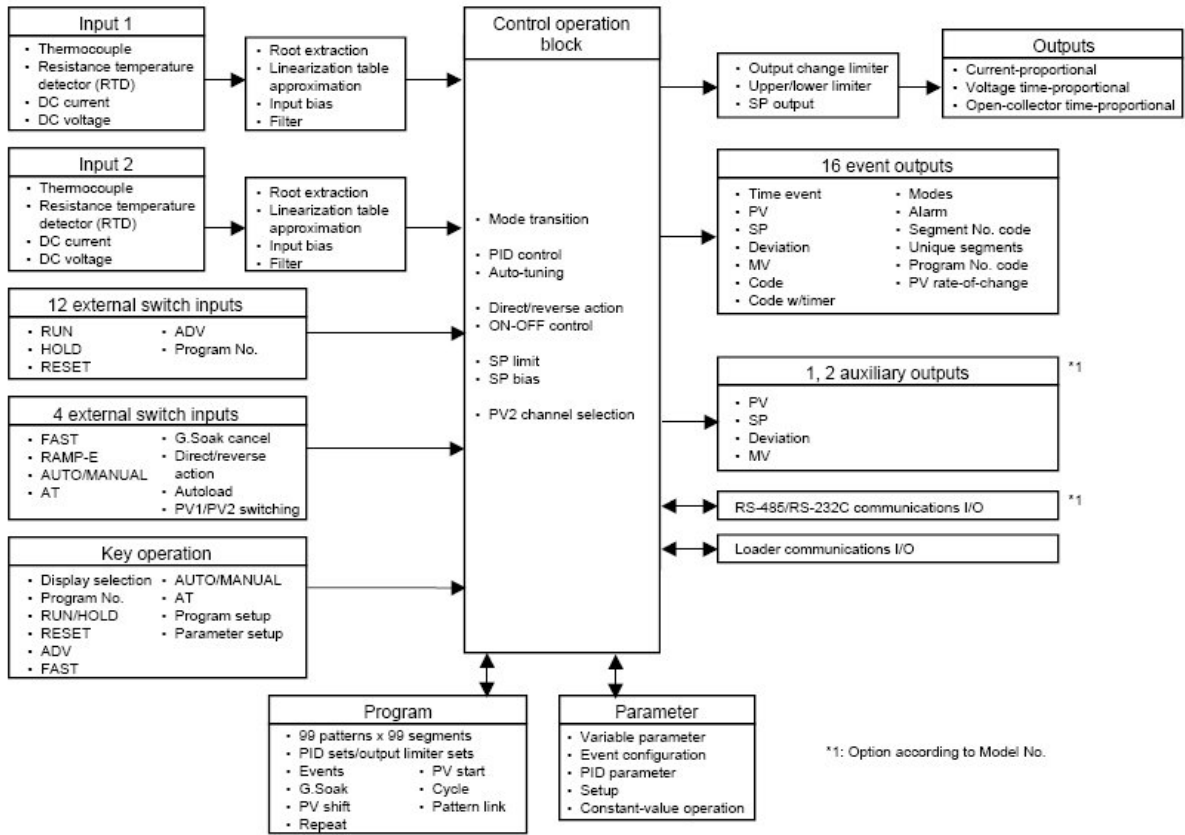

The DCP551 supports: 16 event outputs, 16 external switch inputs and a wide range of other functions as part of the standard specification; and communications and auxiliary output as option functions.

- *Accuracy of  $\pm 0.1$  % FS. Easy-to-view large display characters. Compact design*
- *2 PV input type also available*
- *Any input type can be selected by console key operation. Easy operation aided by guidance messages*
- *Up to 99 program patterns can be stored and up to 99 segments can be programmed to each pattern.*
- *Various events can be selected and set for the 16 event outputs, and code events comprising a combination of two or more points can be set.*
- *16 external switch inputs allow the control of remote selection of program Nos. or operation.*
- *CE marking-compatible*  
*Applicable standards: EN61010- 1*

Figure 1—DCP551 – Digital Control Programmer

# BASIC FUNCTION BLOCKS of DCP551

## Specifications

<b>Program</b>	<b>Number of programs</b>	99
	<b>Number of segments</b>	99 per program, 2000 per controller
	<b>Segment setting system</b>	RAMP-X: Set by set points (SP) and time. RAMP-T: Set by set points (SP) and ramp ( $\Theta$ ) RAMP-E Set by set points (SP) and $\Delta$ SP per external switch input 1
	<b>Segment time</b>	0 to 500 hours 0 minute, 0 to 500 minutes 0 second, 0.0 to 3000.0 seconds (time unit selectable)
	<b>Segment ramp</b>	1 to 10000 U/hour, 1 to 10000 U/minute, 1 to 10000 U/second (time unit selectable)
	<b>Segment <math>\Delta</math>SP</b>	1 to 10000 U/l pulse
	<b>Number of sub-functions</b>	4000 settings per controller
	<b>Sub-function action</b>	Events, PID set, output limiter set, G, Soak, PV shift, repeat
	<b>Events (16)</b>	Set operating point corresponding to event type
	<b>PID set No.</b>	Set 0 (continuation of previous segment), 1 to 9, A set (automatically switched) and ON-OFF control
	<b>Output limiter set</b>	Set 0 (continuation of previous segment), 1 to 9
	<b>G.Soak</b>	Set type (start/end points and overall) and G.Soak width 0 to 1000 U.
	<b>PV shift</b>	-10000 to +1 0000 U
	<b>Repeat</b>	Set return destination segment No. and repeat count.
	<b>PV start</b>	Set type (rising/falling or both) for each program.
	<b>Cycle</b>	Set cycle count for each program.
	<b>Pattern link</b>	Set program No. 0 to 99 (0: no link) for each program.
<b>Tag</b>	Set 8 alpha-numeric's or symbols for each program.	
<b>Basic time accuracy</b>	$\pm 0.01$ % (segment time setting = 0, with 0.1 second delay for each repeat and cycle)	
<b>Inputs</b>	<b>Input type</b>	Thermocouple, resistance temperature detector (RTD), DC voltage, DC current multi-range (See pages 6, 7.)
	<b>Sampling cycle</b>	0.1 seconds
	<b>Input bias current</b>	Thermocouple~DC voltage input: Max. $\pm 1.3 \mu\text{A}$ (at peak value and reference conditions) 1 V or higher range: Max. $-3 \mu\text{A}$
	<b>Input impedance</b>	DC current input: approx. 50 ohms (under operating conditions)
	<b>Measuring current</b>	RTD input: Approx. 1 mA current flow from terminal A (under operating conditions)
	<b>Influence of wiring resistance</b>	Thermocouple, DC voltage input: Thermocouple: $0.5 \mu\text{V}/\text{ohm}$ DC voltage (max. 1 V range): $0.5 \mu\text{V}/\text{ohm}$ DC voltage (5 V range): $3 \mu\text{V}/\text{ohm}$ DC voltage (10 V range): $6 \mu\text{V}/\text{ohm}$ RTD input: Max. $\pm 0.01\%$ FS/ohm in wiring resistance range 0 to 10 ohm Range of F01, F33, P01 and P33: $\pm 0.02\%$ FS/ohm max.
	<b>RTD input allow- able wiring resistance</b>	Ranges other than FO1, F33, PO1 and P33: 65 ohms max. (including Zener barrier resistance. Note that site adjustment is required.) Ranges of FO1, F33, PO1 and P33: 10 ohms max. (Zener barrier cannot be used.)
	<b>Allowable parallel resistance</b>	Thermocouple disconnection detection allowable parallel resistance: 1 Mohm min.
	<b>Max. allowable input</b>	Thermocouple, DC voltage input: -5 to +15V dc DC current input: 50 mA dc, 2.5V dc
	<b>Burnout</b>	Detection selectable
	<b>Over-range detection threshold</b>	110% FS min.: Upscaled -10% FS max.: Downscaled (Note that F50 range is not downscaled.)
	<b>Cold-junction compensation accuracy</b>	$\pm 0.50^\circ\text{C}$ (under standard conditions)
<b>Cold-junction compensation system</b>	Internal/external ( $0^\circ\text{C}$ only) compensation selectable	

<b>Inputs</b>	<b>Scaling</b>	-19999 to +20000 U (possible in case of linear input only. Inverse scaling possible. Decimal point position settable at any point)
	<b>Square root extraction</b>	Possible. Dropout: 0.2 to 10.0% in case of DC current or DC voltage range
	<b>PV equalizer (linearization table approximation)</b>	PV1: 9 segments (10 points set) PV2: 19 segments (20 points set)
	<b>Input bias</b>	-1000 to +1000 U variable
	<b>Digital filter</b>	0.0 to 120.0 seconds variable (0.0: filter OFF)
<b>External switch inputs</b>	<b>Number of Inputs</b>	16
	<b>Types of connectable outputs</b>	Dry contacts (relay contact) and open-collector (current sink to ground)
	<b>Terminal voltage (open)</b>	8.5 V $\pm$ 0.5 V between common terminals (terminals 12, 40) and each input terminal (under operating conditions)
	<b>Terminal current (short-circuit)</b>	Approx. 6 mA between each terminal (under operating conditions)
	<b>Allowable contact resistance (dry contact)</b>	ON: 250 $\Omega$ max. (under operating conditions) OFF: 100 k $\Omega$ min. (under operating conditions)
	<b>Voltage drop (at open-collector ON)</b>	2 V max. (under operating conditions)
	<b>Leakage current (at open-collector OFF)</b>	0.1 mA max. (under operating conditions)
	<b>Assignments (fixed)</b>	RUN, HOLD, RESET, ADV, program No.
	<b>Assignments (variable)</b>	RAMP-E, FAST, AT, AUTO/MANUAL, G.Soak cancel, direct/reverse action, auto-load, PV1/2 switching
	<b>Input sampling cycle</b>	0.1 seconds
	<b>ON detection min. hold time</b>	0.2 seconds (0.4 seconds for program No.)
<b>Indication/Programmer</b>	<b>Upper display</b>	Green 5-digit, 7-segment LED This displays PV values in the basic display state. Item codes are displayed in the parameter setup.
	<b>Lower display</b>	Orange 5-digit, 7-segment LED This displays SP and output % in the basic display state. Setting values are displayed in the parameter setup.
	<b>Program No. display</b>	Green 2-digit, 7-segment LED This displays program No. in the basic display state.
	<b>Segment No. display</b>	Green 2-digit, 7-segment LED This displays segment No. in the basic display state. Item Nos. are displayed in parameter setup, and alarm No. is displayed when alarm occurs.
	<b>Message display</b>	This displays output graph, deviation graph, event state and tags in the basic display state. This displays reference messages in the parameter setup and program setup. This displays operation details and operation results of memory card operation.
	<b>Profile display</b>	7 orange LEDs Displays program pattern rise, soak and fall trends.
	<b>Status displays</b>	22 round LEDs Modes: RUN, HLD, MAN, PRG (green) Display details: PV, SP, OUT, TM, CYC, SYN, DEV (green) Battery voltage: BAT (red) (blinks at low voltage) Status: AT (green) Events: EG1, EG2 (red)
	<b>Operation keys</b>	16 rubber keys
	<b>Loader connector port</b>	1 (dedicated cable with stereo miniplugs)

<b>Modes</b>	<b>Program operation modes</b>	READY: Ready to run program (control stop/program No. selectable)	
		RUN: Program run	
	<b>Constant-value operation modes</b>	HOLD: Program hold	
		FAST: Program fast-forward	
<b>Controller</b>	<b>PID controls</b>	END: Program end	
		READY FAST: Ready to run and fast-forward program	
		AUTO: Automatic operation	
		MANUAL: Manual operation (output can be controlled on console)	
		Proportional band (P)	0.0 to 1000.0% (0.0: ON-OFF control)
	Reset time (I)	0 to 3600 seconds. 0 seconds: PD control	
	Rate time (D)	0 to 1200 seconds. 0 seconds: PI control	
	MV limit	Lower limit: -5.0 to upper limit % Upper limit: Lower limit to +105.0%	
	Manual reset	0.0 to 100.0%	
	<b>PID controls</b>	Number of PID sets	16 sets for program operation (9 segment unique sets+ 7 sets for automatic zone selection)
		PID set selection	Segment designation/automatic zone selection can be switched by program operation.
		MV change	0.1 to 110.0%/0.1 seconds
Auto-tuning		Automatic setting of PID value by limit cycle system	
ON-OFF control differential		0 to 1000 U	
<b>Direct/reverse actionswitching</b>	Possible		
<b>Programmer function</b>	Switching	MV output switchable to SP output	
	Scaling	ossible	
	Output resolution	1/1 0000	
<b>Outputs</b>	<b>Auxiliary output</b>	Output types	PV, SP, deviation, MV, PV1, PV2
		Scaling	ossible
	<b>Current output (5G) auxiliary outputs CH1, CH2</b>	Output current: Allowable load resistance: Output accuracy: Output resolution: Max. output current Min. output current Output updating cycle: Open terminal voltage:	4 to 20 mA dc 600 Ω max. (under operating conditions) ±0.1 % FS max. (under standard conditions) 1/1 0000 21.6 mA dc 2.4 mA dc 0.1 seconds 25 V max.
		<b>Voltage output (6D)</b>	Allowable load resistance: Load current adjustment: Variable open terminal voltage: OFF leakage current Output response time: Output resolution: Time-proportional cycle:
	<b>Open-collector output (8D)</b>	External supply voltage: Max. load current: OFF leakage current ON residual voltage: Output resolution: Time-proportional cycle:	12 to 24V dc 100 mA/load 0.1 mA max. 2 V max. 1/1000 1 to 240 seconds variable
		<b>Open-collector output</b>	External supply voltage: Max. load current: Max. common current: OFF leakage current: ON residual voltage:

<b>Event outputs</b>	<b>Event types</b>	PV type	PV, deviation, w/ deviation standby, absolute value deviation, w/absolute value deviation standby, PV rate-of-change, SP, MV, G.Soak absolute value deviation w/ G.Soak absolute value deviation standby, PV1 constant operation, PV2 constant operation, difference between PV1-PV2 at channel switching, difference between PV1-PV2
		Time type	Time events, RAMP-E time monitor, segment time, program time
		Code type	Code event, code event w/ timer, program No. binary code, segment No. binary code, program No. BCD code, segment No. BCD code
		Mode type	Unique segment, RUN+ HOLD+ END+ FAST, HOLD, READY+READY FAST, END, G.Soak standby, MANUAL, AT executing, FAST+READY FAST, console operation in progress, RUN, advance, all alarms, PV range alarm, controller alarm, PV1 currently selected, PV2 currently selected, low battery voltage
	<b>Event Hysteresis</b>	In case of PV type set, 0 to 1000 U	
<b>Event ON delay</b>	0.0 to 3000.0 can be set to four events		
<b>Communications</b>	<b>RS-485</b>	Network	Multidrop This controller is provided with only slave instrument functionality. 1 to 16 units max. (DIM) 1 to 31 units max. (CMA, SCM)
		Data flow	Half duplex
		Synchronization	Start-stop synchronization
		Transmission system	Balanced (differential)
		Data line	Bit serial
		Signal line	5 transmit/receive lines (3-wire connection also possible)
	<b>RS-485</b>	Transmission speed	1200, 2400, 4800, 9600 bps
		Transmission distance	500 m max. (total) (300 m max. for MA500 DIM connection)
		Other	Conforming to RS-485 interface specifications
		Char. bit count	11 bits/character
		Format	1 start bit, even parity, 1 stop bit; or 1 start bit, no parity, and 2 stop bits
		Data length	8 bits
		Isolation	All inputs and outputs are completely isolated except external switch inputs.
	RS-485 communications can be performed by connecting to a computer equipped with an RS-485 interface		
	<b>RS-232C</b>	Network	1:1 Connected, This controller is provided with only slave instrument functionality.
		Data flow	Half duplex
		Synchronization	Start-stop synchronization
		Transmission system	Unbalanced type
		Data line	Bit serial
		Signal line	3 transmit/receive lines
		Transmission speed	1200, 2400, 4800, 9600 bps
		Transmission distance	15 m max.
		Other	Conforming to RS-232C interface specifications
	Char. bit count	11 bits/character	
	Format	1 start bit, even parity, 1 stop bit; or 1 start bit, no parity, and 2 stop bits	
	Data length	8 bits	
	Isolation	All inputs and outputs are completely isolated except external switch inputs.	

<b>General Specifications</b>	<b>Memory backup</b>	Memory Battery backed up RAM Battery life Controller power OFF: Approx. 5 years under standard conditions					
	<b>Rated power voltage</b>	100 to 240V ac, 50/60 Hz Controller power ON: Approx. 10 years under standard Conditions					
	<b>Power consumption</b>	25 VA max.					
	<b>Power ON rush current</b>	50A max.					
	<b>Power ON operation</b>	Reset time: 10 seconds max. (time until normal operation is possible under normal operating conditions).					
	<b>Allowable transient power loss</b>	20 ms max. (under operating conditions)					
	<b>Insulation resistance</b>	Min. 50MΩ across power terminal 39 or 40 and FG terminal 52 or 53 (by 500V dc megger)					
	<b>Dielectric strength</b>	1500V ac 50/60 Hz for 1 minute between power terminal and FG terminal  Note) The primary side and secondary side capacities are joined inside the product. For this reason, when carrying out a withstand voltage test, disconnect the wiring of the grounded secondary side terminals (e.g. when grounding type thermocouple is used) from that terminal. If the test is carried out with the wiring as it is, this might result in malfunction.					
<b>General Specifications</b>	<b>Standard conditions</b>	<b>Ambient temperature</b>	23 ±2°C				
		<b>Ambient humidity</b>	60±5%RH				
		<b>Rated power voltage</b>	105V ac±1%				
		<b>Power frequency</b>	50±1Hz. Or 60+/-1Hz				
		<b>Vibration resistance</b>	0 m/s <sup>2</sup>				
		<b>Shock resistance</b>	0 m/s <sup>2</sup>				
		<b>Mounting angle</b>	Reference plane (vertical) ±3				
	<b>Operating conditions</b>	<b>Ambient temperature</b>	0 to 50°C (ambient temperature at the bottom side of case when gang mounted)				
		<b>Ambient humidity range</b>	10 to 90%RH (condensation not allowed)				
		<b>Rated power voltage</b>	100 to 240V ac				
		<b>Allowable power voltage</b>	90 to 264V ac				
		<b>Power frequency</b>	50±2 Hz, or 60±2Hz				
		<b>Vibration resistance</b>	0 to 1.96 m/s <sup>2</sup>				
		<b>Shock resistance</b>	0 to 9.80 m/s <sup>2</sup>				
		<b>Mounting angle</b>	Reference plane (vertical) ±10°				
	<b>Transport/storage conditions</b>	<b>Ambient temperature range</b>	-20 to +70 °C				
		<b>Ambient humidity range</b>	10 to 95%RH (condensation not allowed)				
		<b>Vibration resistance</b>	0 to 4.90 m/s <sup>2</sup> (10 to 60 Hz for 2 hours each in X, Y and Z directions)				
		<b>Shock resistance</b>	0 to 490 m/s <sup>2</sup> (3 times vertically)				
		<b>Package drop test</b>	Drop height: 60 cm (1 angle, 3 edges and 6 planes; free fall)				
		<b>Terminal screw</b>	M3.5 self-tapping screws				
		<b>Terminal screw Tightening torque</b>	0.78 to 0.98 Nm				
	<b>Mask/case materials</b>	Mask: Multilon Case: Multilon					
	<b>Mask/case color</b>	Mask: Dark gray (Munsell 5Y3.5/1), Case: Light gray (Munsell 2.5Y7.5/1)					
	<b>Installation</b>	Specially designed mounting bracket

## DC Current, DC Voltage

Input Type				Input Range (FS)	Accuracy (under standard conditions)		
Symbol	Cod	Range	No.				
mA (linear)	Col	48	4 to 20 mA	Programmable range -19999 to +20000 (decimal point position can be changed)	+/-0.1%FS		
	Z51	52	2.4 to 20 mA		+/-0.1%FS		
mV	MO1	4	0 to 10 mV		+/-0.1%FS		
	L02	50	-10 to 10 mV		+/-0.1%FS		
		51	0 to 100 mV		+/-0.15%FS		
mA (linear)	CO1	128	4 to 20 mA		Programmable range -19999 to +20000 (decimal point position can be changed)	+/-0.15%FS	
	Z51	124	2.4 to 20 mA			+/-0.1%FS	
V (linear)		129	0 to 1V			+/-0.1%FS	
		130	-1 to +1V	+/-0.1%FS			
	Vol	131	1 to 5V	+/-0.1%FS			
		132	0 to 5V	+/-0.1%FS			
		133	0 to 10V	+/-0.1%FS			

## Handling Precautions

- The unit of code Z06 is Kelvin (K).
- The PV lower limit alarm does not occur with codes F50 and P50.
- The number of digits past the decimal point for DC current and DC voltage is programmable within the range 0 to 4.
