## **Технические характеристики на**

### **HON 720**

# SAFETY SHUT-OFF VALVE HON 720

## Application, Characteristics, Technical Data

### Application

- main safety device for gas pressure regulating stations
- suitable for natural gas according to DVGW G 260, other gases on request

### Characteristics

- compact design; small face-to-face dimension
- low pressure drop (valve seat diameter is same size as pipe size diameter)
- easy maintenance due to interchangeable cartridge assembly
- version with different actuators as an optional feature
- shut-off reaction at diaphragm fracture
- electric release and remote indication

TECHNICAL DATA		
max. service pressure p <sub>max</sub>	- DN 2 - DN 50, DN 80, DN 10	16 bar 25 bar (depending on the flange version)
sizes	DN 25, DN 50, DN 80 and DN 100	
connections	<ul style="list-style-type: none"><li>- DN 25: DIN-flanges PN 16 and flanges acc. to ANSI 150 RF</li><li>- DN 50, DN 80, DN 100: DIN-flanges PN 16, PN 25 and flanges acc. to ANSI 150 RF</li></ul>	
valve diameter	same size as nominal width	
materials	main valve body DN 25 and DN 50 main valve body DN 80 and DN 100 control unit body internal parts diaphragms, o-rings	cast steel cast steel, ductile iron cast aluminium aluminium, stainless steel, brass, steel rubber-like plastic material (NBR)
ambient temperature range class 2	-20 °C to +60 °C	
function and strength	acc. to DIN EN 14382 (DIN 3381)	
special features	manual release electro-magnetic release at current supply / current drop electric remote control of valve position "closed"	
Ex-protection	The device does not have any potential ignition sources and thus ATEX 95 does not apply to it (applied electronic accessories comply with the ATEX requirements).	
DIN-DVGW-Reg.-No.	NG-4303AU0020	
CE-sign acc. to PED	 Honeywell CE 0085

	2	grey	5.0	2.000 ... 10.00	0.400			1
	3	brown	6.3	5.000 ... 27.50	0.800			1

\*) Note: if control devices are used with both overpressure and underpressure release, then the min. gap between the two setpoints  $p_{dso}$  and  $p_{dsu}$  has to be at least 10% larger than the sum of the two differential values ( $\Delta p_{wo} + \Delta p_{wu}$ ).

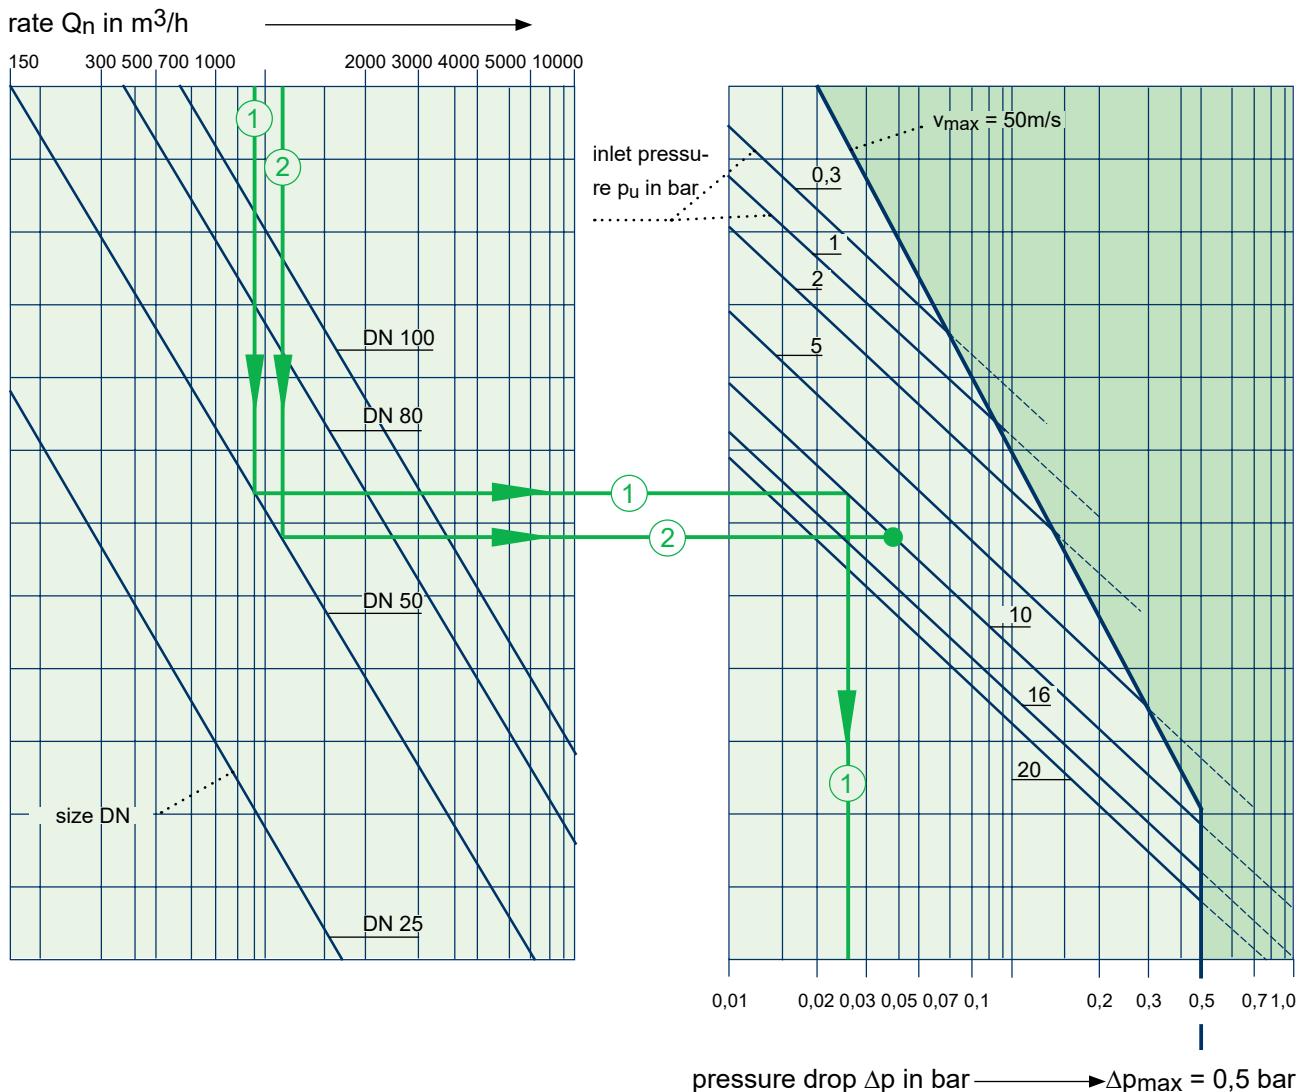

$$p_{dso} - p_{dsu} \geq 1.1 (\Delta p_{wo} + \Delta p_{wu})$$

\*\*) The higher response precision category is valid for the first half, the lower response precision category is valid for the second half of the setting range.

## SAFETY SHUT-OFF VALVE HON 720

### Application, Characteristics, Technical Data

Diagram for determination of pressure drop and max. permissible flow velocity (natural gas  $\rho_n=0.83 \text{ kg/m}^3$ ) flow

1.) determination of pressure drop:  
This diagram is valid for natural gas.  
For other gases please convert the  
flow rate into the natural gas flow.

$$Q_{n \text{ nat. gas}} = \frac{Q_{n \text{ gas}}}{f} \text{ in } \text{m}^3/\text{h}$$

conversion factor f (for other conversion factors please see Honeywell-booklet)	nitrogen methane town gas Honeywell-booklet	0,81 1,08 1,23 1,26
--	--	------------------------------

example: given:  $\text{DN } 50$ ,  $p_u = 10 \text{ bar}$ ,  $Q_n = 1100 \text{ m}^3/\text{h}$  (town gas)

$$\text{determination of pressure drop: } Q_{n \text{ nat. gas}} = \frac{1100 \text{ m}^3/\text{h}}{1,23} = 900 \text{ m}^3/\text{h}$$

found: (path → 1):  $\Delta p = 0,027 \text{ bar} < \Delta p_{\max} = 0,5 \text{ bar}$

2.) permissible gas velocity  $v_{\max}$ . It can be determined by using the nominal flow rate.

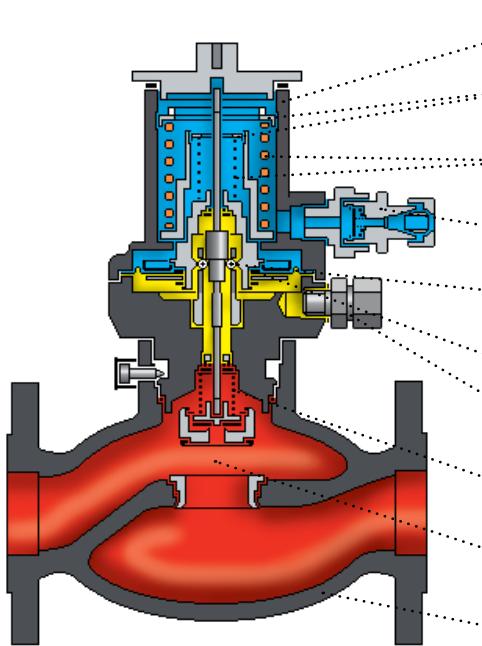

example: given:  $\text{DN } 50$ ,  $p_u = 10 \text{ bar}$ ,  $Q_n = 1100 \text{ m}^3/\text{h}$  (town gas)

gas velocity control: → found: (path 2)  $v_{\max} = 50 \text{ m/s}$

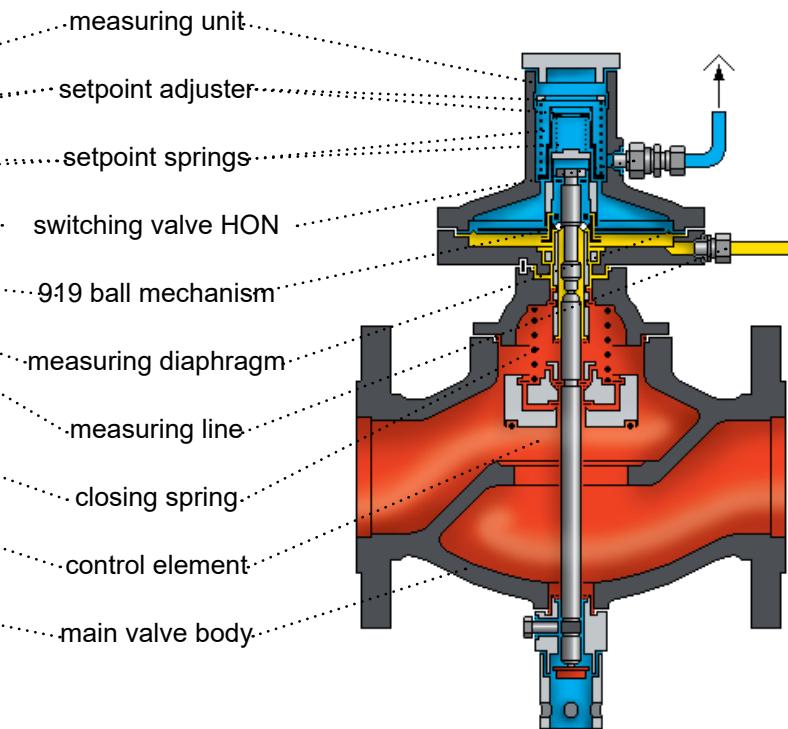

## SAFETY SHUT-OFF VALVE HON 720

### Design and Operation

HON 720 - DN 25:

HON 720 - DN 80:

The safety shut-off valve (SSV) HON 720 is designed to automatically shut off the gas flow of a gas pressure regulating station, as soon as the pressure within the system to be protected rises above or falls below pre-set limits.

The HON 720 consists of a main valve body and a measuring unit as an actuating element. For regular maintenance the actuating element can easily be subjected to a visual inspection. In case of failure the actuating modules can be replaced by spare units, and the repair works can be carried out in the workshop without having to shut down the gas pressure regulating system.

All measuring units of the safety shut-off valve are equipped with a spring-loaded diaphragm to block or release the ball mechanism of the tripping device. The diaphragm assembly is suitable for both overpressure and/or underpressure release. The response pressures for overpressure release and underpressure release can be adjusted independently from each other.

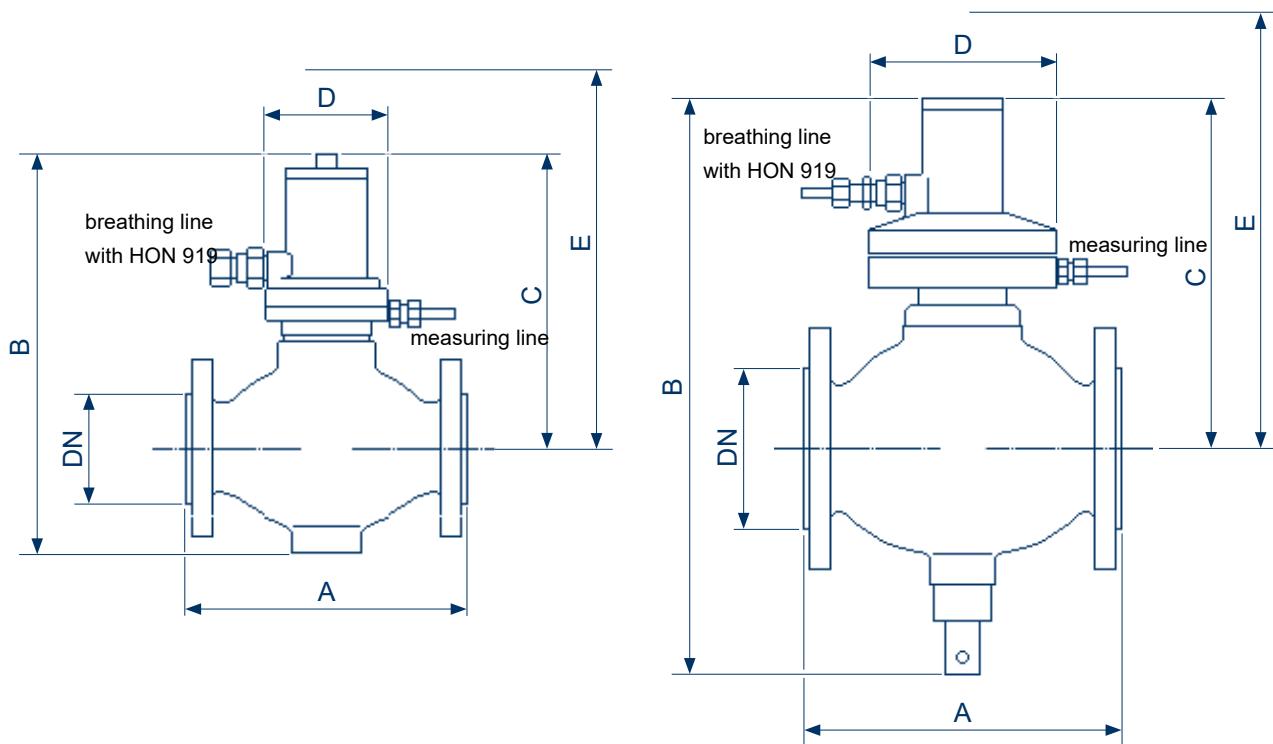

A pressure compensating valve is integrated into the valve plate. This valve can easily be operated by hand under all pressure conditions, thus ensuring pressure balance at the valve plate before opening the main valve.

From size DN 50 upwards the valve stem is provided to go through the pressure chamber. This design feature guarantees a perfect pressure balance, and any changes of service pressure have no influence on the release accuracy.

The SSV control element shuts off the gas flow as soon as the pressure within the system to be protected rises above or falls below pre-set response points. This shut-off is effected by the measuring diaphragm and the tripping bush moving into the release position with the ball mechanism disengaging the valve stem to close the SSV control element. The valve can be re-set by hand only, after the outlet pressure at the measuring point has been decreased or increased to a value lying within the range of the pressure differentials to be observed for re-engagement.
